# 1 Introduction

We are very pleased to announce the latest release of Votiro's Secure File Gateway, version 9.6.2. The focus of this version has been on improving and expanding existing capabilities and resolving some open issues.

Highlights of new features and improvements in this latest version release include:

- Security – better detection/sanitization capabilities for macro-enabled docs when the “ScriptControl” method is used.
- New file format support – HEIC (High-Efficiency Image Container) and HEIF (High Efficiency Image File) file formats (used by Apple format to store image files) are now supported. Files using these formats are smaller in size than JPEG files of equivalent quality.
- Release multiple files in 1-click – it is now possible to select multiple files to be released and to send all of them to their original recipients with one click, by using our new “bulk release” button.

## 2 Resolved Issues

The following open issues have been resolved in this latest version release:

- Resolved an issue where some signed PDF files were returned as corrupted.
- Resolved an issue where some benign CSV files were got erroneously blocked by our product.
- Resolved an issue where some PDF files with embedded images could not be sanitized.
- Resolved an issue where a password was requested for Microsoft information protected (MIP) files.

## 3 **Deprecated Features**

We are pleased to announce that no features have been deprecated in version 9.6.2.
