# 1 Introduction

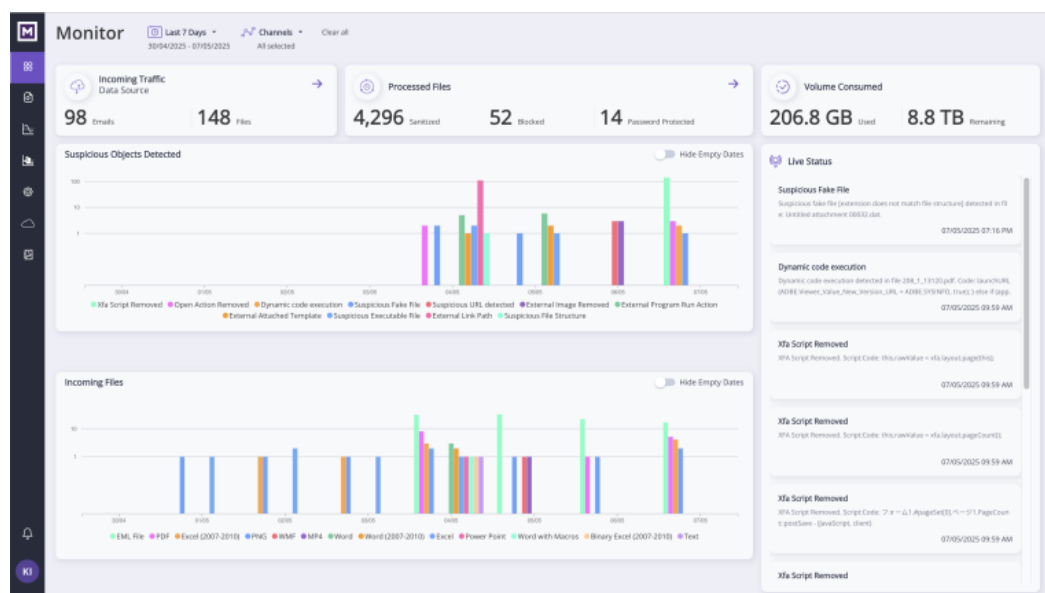

We are very pleased to announce the latest release of Votiro SaaS version 25.05.11. This version contains important enhancements to our product!

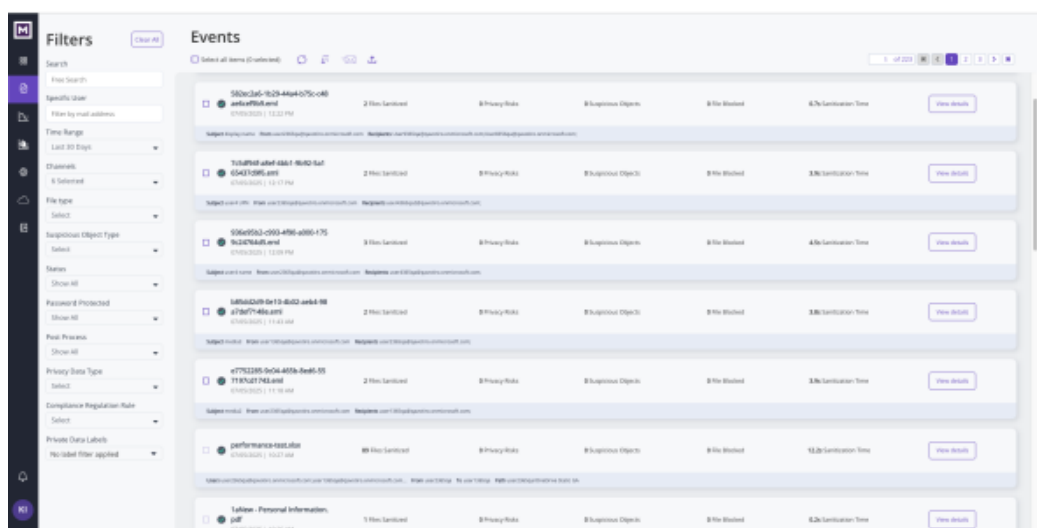

## 2 New Features

The following new features and improvements are added to this version of Votiro SaaS.

### 2.1 Votiro & Menlo – Management portal rebranding

Following the recent acquisition of Votiro by Menlo Security, we're excited to roll out a rebranded management portal that reflects our new, unified direction. The Votiro Management Portal now carries Menlo Security branding, including updated logos, color themes, and a consistent UI aligned with Menlo's platform standards.

## 2.2 Microsoft OneDrive – Enhancements

We're pleased to introduce major enhancements to our Microsoft OneDrive integration. This update ensures high functional product and provides seamless protection and secure file collaboration within OneDrive.

New enhancements and improvements include:

- Added the ability to whitelist specific folders
- Resolved performance issues that cause slow sanitization in high load
- Resolved an issue where in high load some of the files are replaced with empty files
- Resolved an issue where some files are scanned multiple times in high load
- Resolved an issue where the Subscription progress bar shows the wrong number of groups being added for monitoring
- Resolved an issue where the OneDrive scan on demand randomly hangs in the “in progress” state
- Resolved an issue where only one user can be added to the Monitored Users list

## 2.3 Microsoft SharePoint – Enhancements

We're pleased to introduce major enhancements to our Microsoft SharePoint integration.

This update ensures real-time visibility and protection across your organization's collaboration landscape. As files are shared or synced across SharePoint sites, libraries and teams, Votiro automatically detects and secures them—ensuring threat-free content without user disruption.

- **Real-Time Protection**  
Continuously monitor SharePoint activity to automatically detect and remediate privacy risks and file-borne threats. Whether files are uploaded by internal users, synced from OneDrive, or accessed externally, Votiro neutralizes potential threats before exposure.

- **Safe Collaboration at Scale**  
Empower teams to share files confidently across departments, business units, and external collaborators—with automatic sanitization that keeps sensitive data secure and operations uninterrupted.

### 2.3.1 Resolved issues

- Resolved an issue where large files could not be processed and got blocked due to a system error
- Resolved an issue where sanitization could be completed to external users and shared folders
- Added the ability to search for specific sites

## 2.4 CDR Engine

The following enhancements and improvements were added to the CDR engine:

- **SVG File type – Remove external references**  
Our SVG sanitization now eliminates phishing attacks by removing external references.
- **Corrupted files handling**  
Our product now supports handling of Office corrupted files . If an Office file is identified as corrupted, the file will be tagged as corrupted and will be blocked.

## 2.5 DDR Engine

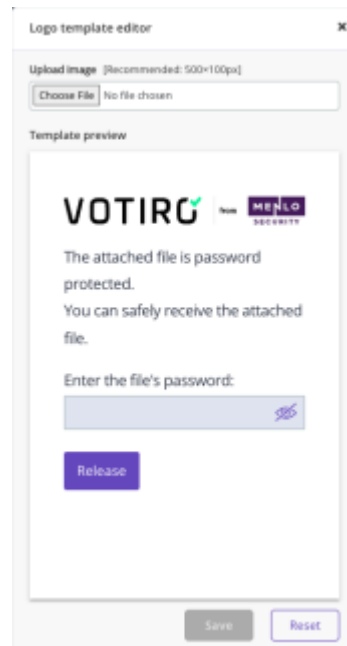

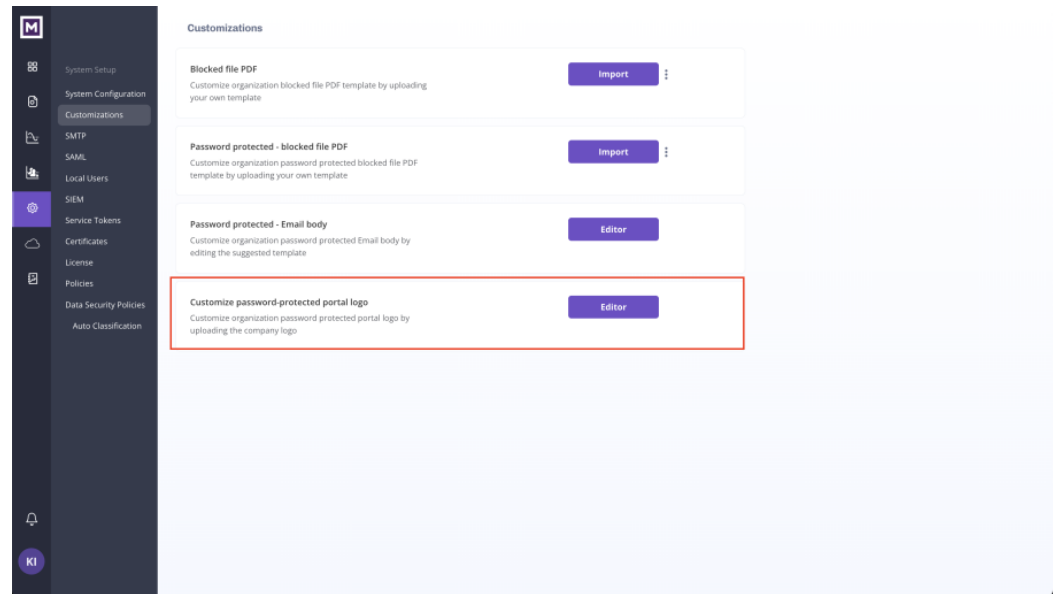

The following enhancements and improvements were added to the DDR engine:

- Enhancements to improve detection accuracy and reduce false positive/negative.
- Our DDR engine now supports detection for large content-length files, up to 1M chars.
- Privacy Playbook - Default confidence level set to "High" by default
- Resolved an issue where PDF masking occasionally led to reduced file quality

## 2.6 Management Platform

The Management platform has been enhanced with the following features:

- **Customize Password-protected portal logo** – Customers can now upload a custom logo to personalize the appearance of their password-protected file access portal. This update enhances branding consistency and provides a more seamless end-user experience.

- **Password-protected portal** – The user now has the ability to view the typed password.

## 3 Resolved Issues

The following open issues have been resolved in this latest version release:

- Resolved an issue where channel filters were not preserved when performing drill-down from dashboards
- Resolved an issue where release original for emails with empty subject couldn't be released
- Resolved an issue where a specific HEIC was rotated due to system failure
- Resolved an issue where an Excel file from a specific URL was incorrectly detected as a password protected file
- Resolved an issue where a Report was missing from Menlo's UI and appears as NA
