1 Introduction

1.1 Votiro's Secure File Gateway Technology

Votiro's Secure File Gateway secures your organization by positively selecting safe elements of each file and email delivered to your network.

Votiro's Secure File Gateway is unlike traditional detection-based file security solutions that scan for suspicious elements and block some malicious files from entering your organization. Instead, threats to your network from unknown and malicious elements of a file are simply not included in the file delivered by Votiro's Secure File Gateway. This results in every file entering your organization's network being 100% safe.

Votiro's Secure File Gateway protects your organization from all sources of file exploit attempts that are processed through various channels such as email, web uploads, web downloads, or any supported custom application.

Votiro Secure File Gateway is enterprise-oriented, fast to deploy, easy to integrate, and seamless. It also eliminates the reliance on users' assessment of the safety of incoming emails or files.

Votiro's Secure File Gateway implements a multi-layer security mechanism that integrates several critical components to eliminate cyber threats that attempt to penetrate an organization.

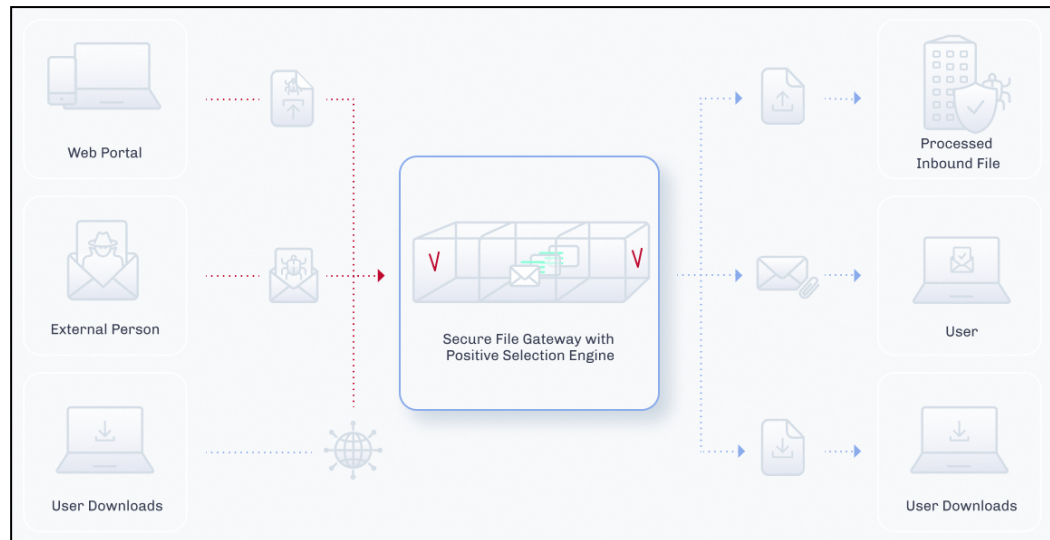

True Type Detection

True Type Detection (TTD) determines a file's type by comparing the extension associated with the file with the specifications dictated by the vendor for that file type. For example, Microsoft Corporation has specified that a file with the extension .docx is a Microsoft Word document. In order for Word to open the file correctly, the file attributes must meet specific criteria designated by Microsoft. TTD verifies the criteria set by Microsoft are met before the file is processed.

When TTD is used in the Votiro's Secure File Gateway solution and specified by the applied policy, files with content that does not match the file extension criteria can be blocked to prevent malicious content exploits.

1.2 System Architecture and Data Flow

A general view of Votiro's Secure File Gateway product in relation to other key elements in the network is provided in the following diagram:

Data flows between Positive Selection Engine, Votiro's Secure File Gateway for Web Applications, Secure File Gateway for Email and Secure File Gateway for Web Downloads. Communication consists of multiple bi-directional messages that include queuing, tracking, file transfers and reports.

Votiro's Positive Selection Engine is at the heart of the Votiro secure file gateway solution. The Positive Selection Engine is provided with a front-end Management Dashboard that is used for the following:

- Monitoring and analyzing positive selection activity in the Positive Selection Engine.
- Creating and editing positive selection policies that are regularly updated in the Positive Selection Engine.
- Storing metadata that describes the files, along with the original and processed files themselves for incident management identification.

1.3 Positive Selection Engine

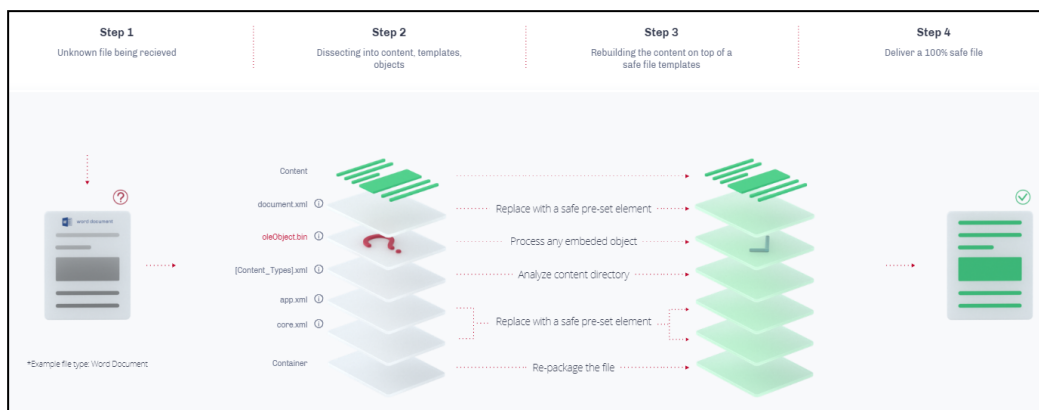

Votiro's Positive Selection Engine is at the heart of the Votiro secure file gateway solution. The Positive Selection Engine keeps only what belongs instead of searching for what does not belong.

Unlike detection-based file security solutions that scan for suspicious elements and block some malicious files, Positive Selection singles out only the safe elements of each file, ensuring every file that enters your organization is 100% safe.

Positive Selection processing involves four steps:

- Step 1: Unknown file is received into your organization.
- Step 2: The file is dissected into content, templates and objects.
- Step 3: The file is rebuilt using content on top of a safe file template.
- Step 4: Delivery of 100% safe file into your organization.

An example of Votiro's Positive Selection Engine processing a file is provided in the following diagram:

1.4 Supported File Types

The File Types table lists the file types and attributes supported by Votiro's Secure File Gateway. The information is arranged according to the categories that appear in the **Action by File Type** area of the **Policies** page in the Votiro Management Dashboard.

- Types marked with ^ are scanned by the Positive Selection Engine and their true file type is verified based on their structure. The files are not modified by this process.
- Types marked with ** are obsolete. They are not recommended as filters in a production environment. Support for these types might be discontinued in a later version.

Table 1 File Types

File Type in Management	File Type	Family Type	Main Extension	Other Extensions
PDF	PDF	Adobe PDF	pdf	

File Type in Management	File Type	Family Type	Main Extension	Other Extensions
Image	Animated GIF	Raster Image Files	gif	
	BMP	Raster Image Files	bmp	rlc
	EMF	Vector Image Files	emf	
	GIF	Raster Image Files	gif	
	JPEG	Raster Image Files	jpeg	jpg, emf, wmf, jp2
	PNG	Raster Image Files	png	emf
	Portable Gray Map Image File ** ^	Raster Image Files	pgm

Anomalies and Limitations

Processing files for positive selection so you only receive secure content occasionally results in some known anomalies and limitations. These include:

- Unknown Ole Objects: Both generic and unknown Ole objects are handled.
- Generic Ole objects will be processed, and unknown Ole objects will be blocked.
- File names with more than 101 non-English characters may not be included.
- As you will see the file size limitations are currently significant sizes.
 - ◆ Archives - 100 MB
 - ◆ Raster images - 100 MB
 - ◆ Text - 100 MB
 - ◆ PDF - 80 MB

- ◆ EML - 64 MB
- ◆ ICS - 5 MB
- ◆ Office - 50 MB
- ◆ Vector images - 10 MB

2 Installing Votiro's Secure File Gateway

To install Votiro's Secure File Gateway quickly into your organization we will create a cluster of virtual machines (VM). We will use static IPs, one for each of the VMs and a VIP for the cluster. Each VM requires dedicated resources, see [Deployment Specifications below](#).

To install Votiro's Secure File Gateway and login to start using the Management Dashboard, follow these four steps:

- Deploy an OVF
- Configure the Network Environment
- Deploy Votiro's Secure File Gateway
- Login to the Management Dashboard

IMPORTANT!

You may need to determine in advance of your installation the following:

- Unique IP addresses: one per VM, and a VIP for the cluster;
- Hostname for FQDN (use lower case alphanumeric characters).

2.1 Deployment Specifications

The following deployment specifications are for the installation of Secure File Gateway with a 3 node cluster. Scale specifications as you increase the number of nodes in your cluster.

The expected minimum performance for this configuration is 35,000 files per hour.

Table 2 Deployment Specifications

Secure File Gateway	3 Node Cluster
CPU Cores	8 per node
RAM	16 GB per node
Drive Capacity	200 GB per node, SSD
Remote Storage Support	File Storage Network. For example, SAN, NAS
Hypervisor Support	VMWare ESXi 6, Amazon Web Services, Microsoft Azure
Network Adapters	4 - 1 per node + 1 global VIP with DNS name

2.2 Pre-requisites and Considerations

There are both pre-requisites and a number of topics for you to consider when implementing Votiro's Secure File Gateway into your environment. See sections for more details:

- [Ports](#)
- [Virtual Appliance Communication Settings](#)
- [Syncing with an NTP Server](#)

- [Using an External Storage Server](#)
- [Load Balancing](#)
- [Votiro Registry in Azure](#)

2.2.1 Ports

Network connectivity requirements enabling secure outbound and inbound communications with Votiro's Secure File Gateway are detailed in the tables below.

Table 3 Outbound Firewall Rules

Outbound	Source	Destination	Port Number	Transport Protocol
Releasing Files	ovf_network	Exchange / Edge	25	tcp
Active Directory	ovf_network	Domain Controller ■ LDAP ■ LDAPS	■ 389 ■ 636	■ tcp ■ tcp
SIEM	ovf_network	SIEM Server	514	udp

Table 4 Inbound Firewall Rules

Inbound	Source	Destination	Port Number	Transport Protocol
SSH, SCP	Any	ovf_network	22	tcp
Processing Request	API Client	ovf_network	443	tcp
Monitoring Grafana	Grafana	ovf_network		
Monitoring Prometheus	Prometheus			

2.2.2 Virtual Appliance Communication Settings

Internal Communication Settings

For internal communications between nodes of each machine inside the VLAN, the following settings are required:

- 22/tcp
- 25/tcp
- 389/tcp (LDAP)
- 636/tcp (LDAPS)
- 2379-2380/tcp
- 6443/tcp
- 10250-10252/tcp
- 10255/tcp

- 24007 – 24008/tcp
- 49152 – 49154/tcp
- 123/udp (See [Syncing with an NTP Server below](#)).
- 514/udp
- 8472/udp

External Communication Settings

For external communications, the following settings are required:

- 22/tcp
- 443/tcp

2.2.3 Syncing with an NTP Server

When using an NTP server, as a pre-requisite you must sync with it using port **123/udp**.

2.2.4 Using an External Storage Server

In addition to the virtual appliance machines' internal storage, you can use an external storage server. Votiro's Secure File Gateway can be configured to communicate with your storage server, using a mount from the external storage to the virtual appliance machines.

When external storage is configured it is used as the main storage area. Storage will contain a set of original and processed files.

The mount created results in the true storage type, such as SAN and NAS, being transparent, leading to Votiro's Secure File Gateway supporting all External Storage types.

For instructions on how to configure External Storage, contact Votiro's Support team.

Note

The internal storage requirement remains at 200 GB per node. It is available for use should the external storage server link fail. Stored files are transferred from the VM to the external storage server when it becomes available.

2.2.5 Load Balancing

Votiro's Secure File Gateway automatically supports load balancing using a basic internal load balancer. We recommend that you implement a hardware-based load balancer in to your production environment to balance between the nodes of your VM.

WARNING!

If the number of nodes reduces to two, Secure File Gateway will continue working for a maximum of two hours before processing stops.

2.2.6 Votiro Registry in Azure

This consideration is relevant when your Secure File Gateway installation includes an online environment.

To enable secure communication with your Votiro appliance, the proxy server ACL must include permission for the Votiro registry in the Azure URL.

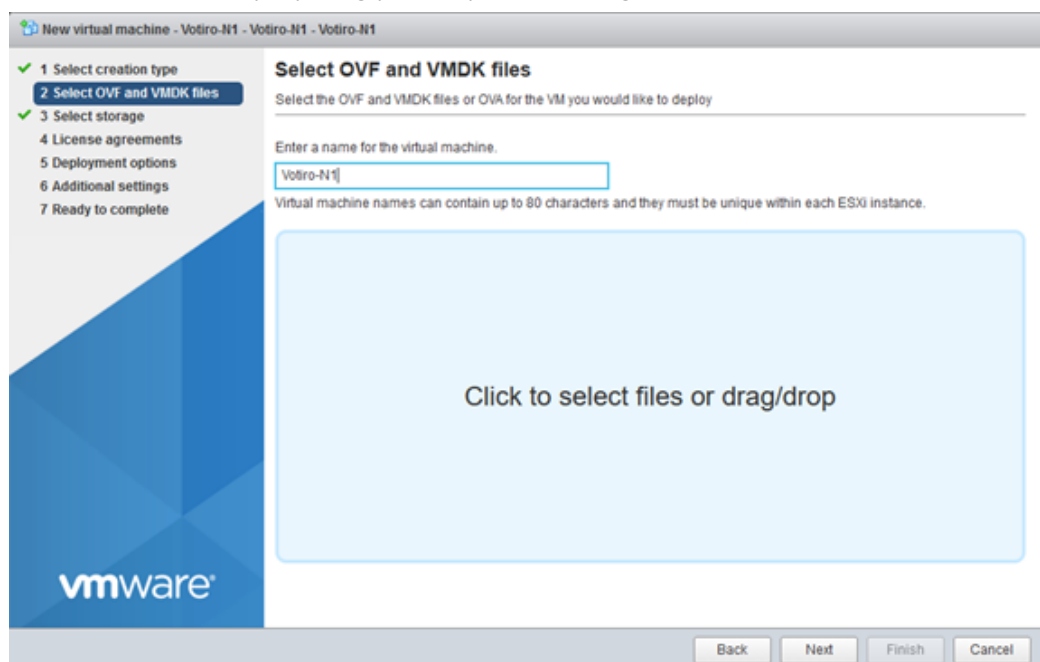

2.3 Deploying an OVF

In this step you will create the virtual machines. You will require a virtual machine for each node in your cluster.

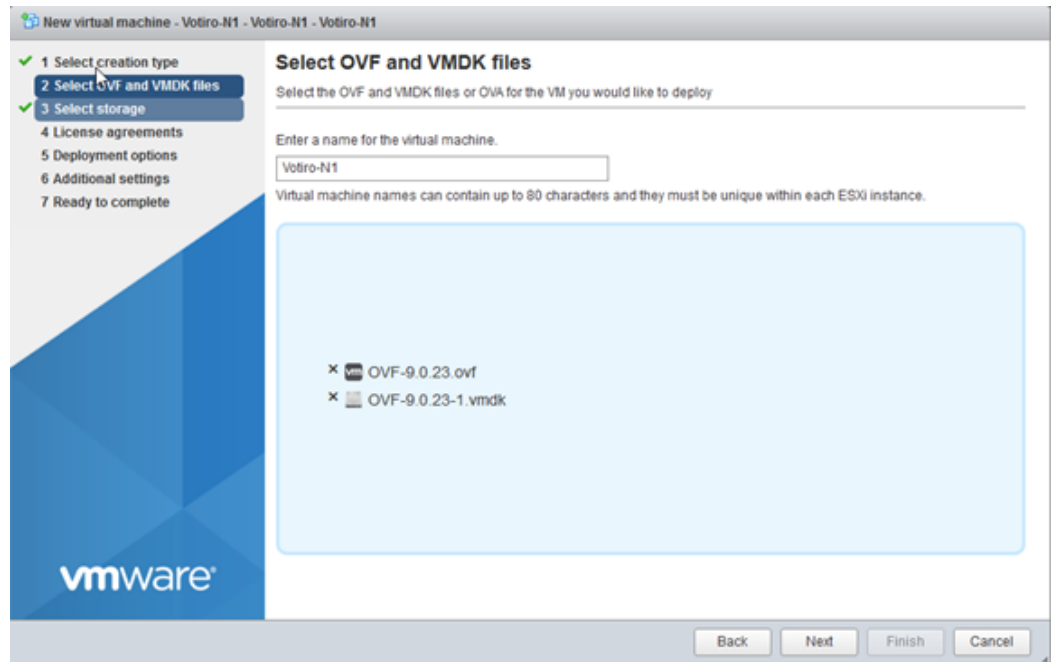

1. Deploy **OVFs**, using these specifications:

- ◆ 8 CPU
- ◆ 16 GB Memory
- ◆ 200 GB Storage

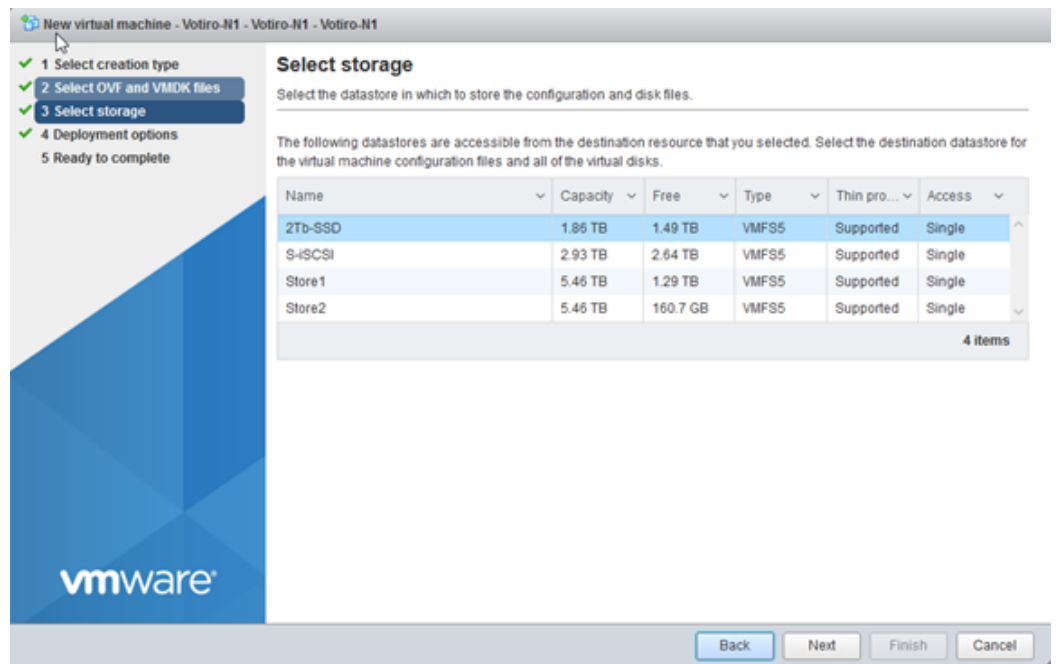

2. Name each **node** uniquely using your corporate naming conventions.

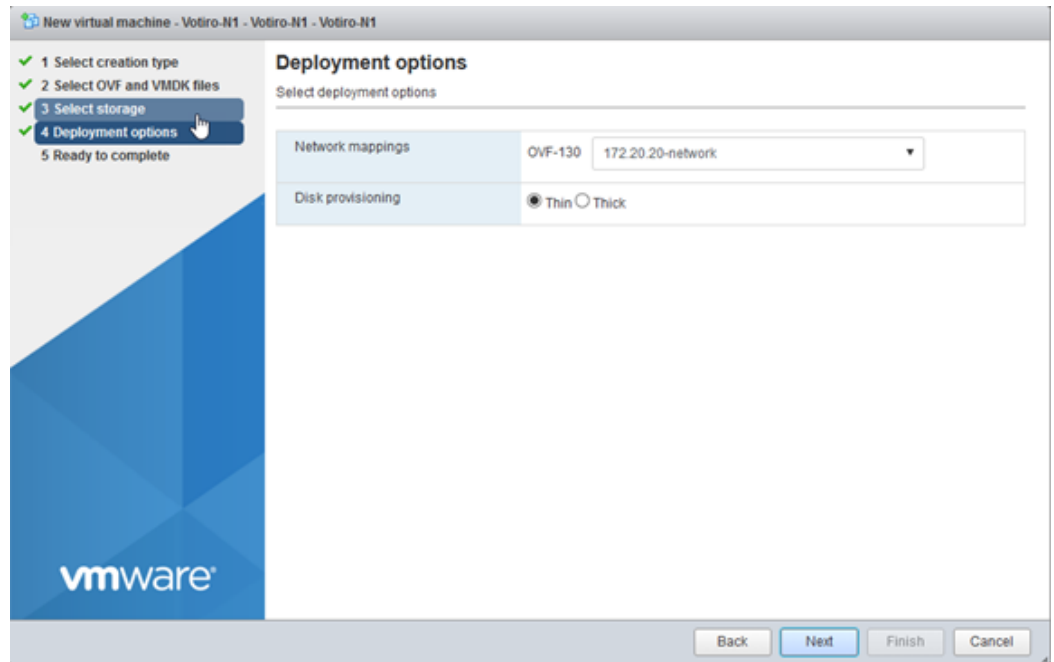

3. Select the **OVF** and **VMDK** files during deployment.

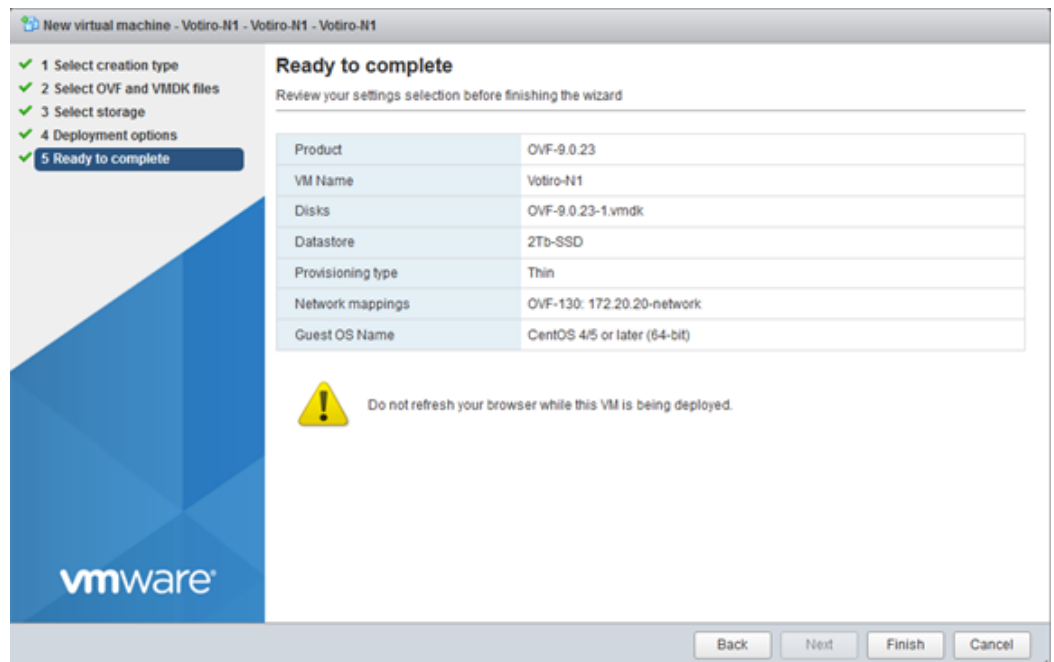

4. Select your preferred storage location. It is recommended you use **SSD storage**.

- Select the network you would like to deploy the appliances on. You may select **Thin** or **Thick** provisioning. 200GB of storage is required for each appliance.

- To complete the deployment, click **Finish**.

There are now three or five virtual machines (VM).

2.4 Configuring the Network Environment

In this step you will configure network settings for each virtual machines.

1. Log in to each VM, use **root** as **login ID** and **password**.
2. Configure each VM with a static IP, Gateway and DNS server.
3. Set a **static IP** on CentOS as follows:
 - a. #ssh into the appliance and run the following command:

```
vi /etc/sysconfig/network-scripts/ifcfg-ens160
```
 - b. Select **I** for insert mode.
 - c. Modify the following fields:

```
BOOTPROTO="static"
IPADDR=172.20.20.50
NETMASK=255.255.255.0
GATEWAY=172.20.20.1
DNS=172.20.20.1
```
 - d. To save the settings, click **Esc** and **:wq**, then click **Enter**.
 - e. For the settings to take effect, use the following command:

```
service network restart
```
4. For your appliance to access the internet define a **nameserver** using lower case alphanumeric characters.
 - a. To open the **resolv config** file with an editor, use the following command:

```
vi /etc/resolv.conf
```
 - b. Select **I** for insert mode.
 - c. At the prompt, enter **nameserver <your_dns>**.

```
Generated by NetworkManager
nameserver 172.20.20.1
```

5. Test the server. For example, enter **Ping google.com**.

```
PING www.google.com (173.194.38.188) 56(84) bytes of data:
64 bytes from sin04s02-in-f20.1e100.net (173.194.38.188): icmp_seq=1 ttl=53 time
=117 ms
64 bytes from sin04s02-in-f20.1e100.net (173.194.38.188): icmp_seq=2 ttl=53 time
=118 ms
64 bytes from sin04s02-in-f20.1e100.net (173.194.38.188): icmp_seq=3 ttl=53 time
=111 ms
64 bytes from sin04s02-in-f20.1e100.net (173.194.38.188): icmp_seq=4 ttl=53 time
=121 ms
```

6. To change node names, use the following command:

```
hostnamectl set-hostname <VotiroN1>
```

Repeat this step on all nodes.

Your machines are now configured and connected to your network.

IMPORTANT!

We recommend you change the root password on all nodes.

2.5 Deploying Votiro's Secure File Gateway

1. To deploy Votiro's Secure File Gateway select one of the machines and run command:

```
./initcluster.sh
```

2. Agree to Terms and Conditions, and continue installation, then enter **Y**.

```
This Agreement may not be altered except by agreement in writing executed by an authorized representative of each party.
If you have any questions regarding this Agreement, please call Votiro at +972-73-7374102 or send inquiries via electronic mail to: info@votiro.com.

Type (Y)es to state you have read and agree to the Terms and Conditions. (N)o to cancel: y

Enter Votiro Cluster VIP: 10.130.1.33
Enter Votiro Cluster FQDN: king-va
Would you like to use the online mode (internet connection is required) (Y)es/(N)o ? y
Restarting Docker: Ok
Restarting Kubelet: Ok
Initializing Kubernetes (Please wait): Ok
Copying Kubernetes Configs: Ok
Setting up Kubernetes network: Ok
Connecting Kubernetes nodes...
Enter node ip (leave empty to end): 10.130.1.31
Connecting node 10.130.1.31...
Ok
Enter node ip (leave empty to end): 10.130.1.32
Connecting node 10.130.1.32...
Ok
Enter node ip (leave empty to end):
Preparing all nodes: Ok
```

Note

IP addresses are required for the installation: one per machine plus a one for the VIP.
For example, a 3-node cluster will need 4 IP addresses.

3. Enter the **VIP** for the Secure File Gateway cluster.
4. Enter the Secure File Gateway's **FQDN**, using lower case alphanumeric characters.
5. The **online mode** setting allows the reputation of a link to be checked, ensuring the destination is safe. Links in the form HTTP:// and HTTPS:// are checked, if found to be suspicious the link is removed from the file.

To select how to process files with links, use the **online mode** setting:

- a. To send links to scan, enter **Y**.
- b. To not send links to scan, enter **N**.

Note

An internet connection is required to send links to be scanned.

6. Enter the IP addresses of the remaining machines.

Note

When using an external storage server, ensure all nodes in the cluster have read/write permissions. For additional information, see [Using an External Storage Server on page 17](#).

The Secure File Gateway installation has completed successfully. To login to the Management Dashboard, see [Logging in to the Management Dashboard below](#).

2.6 Logging in to the Management Dashboard

To begin using Secure File Gateway's Management Dashboard:

1. Type the Secure File Gateway cluster's **FQDN** name in your web browser. For example, `https://hostname.yourdomain.com`.

The login screen is displayed.

2. Type in the *username* and *password*. Click **LOGIN**.

The *username* and *password* are the same used by the user for the Active Directory server.

Examples of a *username*: VT\Jane.Smith, Jane.Smith@Votiro.com.

For further details about *usernames* and *passwords*, see the Active Directory Tab section in the Secure File Gateway User Guide [Active Directory Tab on page 39](#)

The Management Dashboard is displayed.

2.6.1 Configuring Authentication to Active Directory

Following the successful installation of Votiro's Secure File Gateway you can configure authentication to Active Directory. Define a Group and User for Votiro Authentication in Active Directory. This should be a service account with standard privileges.

Note

The user must be in the predefined Votiro Group.

2.7 Configuring Password Protected Files Portal

The Password Protected File (PPF) Portal is where the recipient of a password protected file can enter the password so the file can continue being processed by the Positive Selection Engine engine.

You can customize the interactions between Secure File Gateway and your users, so the message is consistent with your organization's branding and style.

The root folder of your VM has an **Extras** folder, containing the following files and commands:

- Blocked_Ppf.rtf
- Blocked.rtf
- update-block-pdf-template.sh

- `update-password-protected—portal-logo.sh`

You can replace the default **rtf** files with documents customized to represent your organization. Then run the command to update Secure File Gateway.

2.7.1 Customizing PPF Message

A message will be sent to the recipient of a PPF advising them that when they enter the password of their PPF it will be processed for positive selection, then released. This message is created from the **Blocked_Pdf.rtf** file. You can make changes to this file and maintain consistency with your organization's branding and messaging style.

The **Blocked_Pdf.rtf** file is used when you update the PDF. The file name must remain the same. Update Secure File Gateway from the same folder, using the following command:

```
./ update-block-pdf-template.sh
```

The PDF will be updated and used instead of the default file.

2.7.2 Customizing PPF Portal Message

The PDF contains a link to Votiro's PPF portal. The user is invited to input the password for the file, at which point processing for Positive Selection Engine will continue. The PPF portal message is created from the **Blocked.rtf** file. You can make changes to this file and maintain consistency with your organization's branding and messaging style.

The **Blocked.rtf** file is used when you update the PPF portal message. The file name must remain the same. Update Secure File Gateway from the same folder, using the following command:

```
./ update-block-pdf-template.sh
```

The PPF portal message will be used instead of the default.

2.7.3 Customizing the PPF Portal Logo

You can configure the image in the PPF portal to be your organization's logo by placing an image file named **logo.png** file in the **Extras** folder. The image should be cropped and without padding. Update Secure File Gateway from the same folder, using the following command:

```
update-password-protected-portal-logo.sh
```

The PPF portal will be updated and use the new image instead of the default.

3 Using the Management Dashboard

The Management Dashboard enables you to perform the following procedures:

- [Analyzing Positive Selection Activity](#)
- [Exploring Incidents](#)
- [Configuring System Settings](#)
- [Managing Positive Selection Policies](#)
- [Generating Reports](#)

To log in to the Management Dashboard:

If you have configured the Management Platform to use Active Directory, only users that appear in the Active Directory group can log on.

1. On the server that is hosting the Management Platform, open a browser and navigate to:

`https://[applianceName]`

where *applianceName* is the name of the Votiro cluster FQDN, hosting the Management Platform.

The login screen is displayed:

2. Type in the username and password and click **LOGIN**.

The Management Dashboard is displayed.

For additional information, see [Logging in to the Management Dashboard on page 23](#)

Note

The Management Dashboard locks down for 10 minutes after three failed login attempt of a single username.

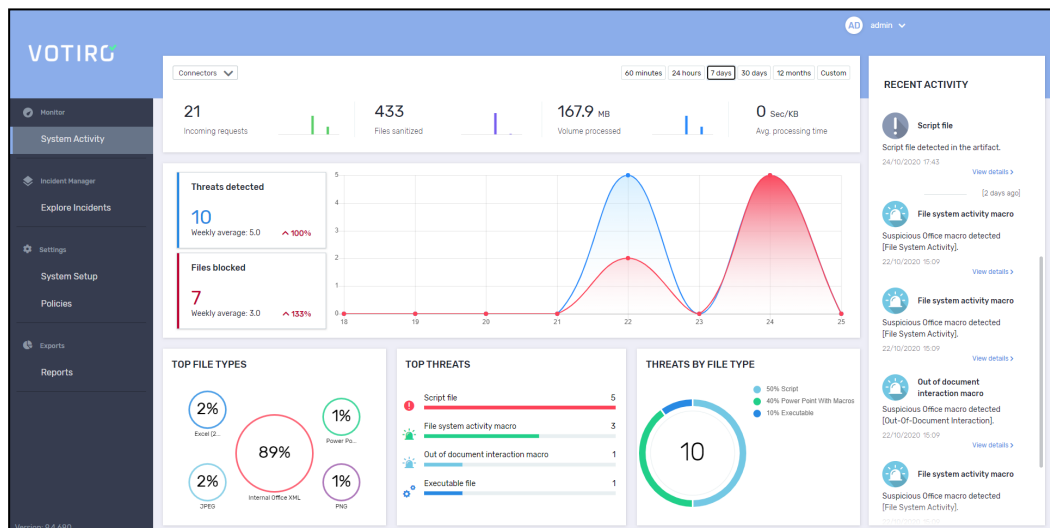

3.1 Analyzing Positive Selection Activity

The System Activity page enables monitoring and analyzing of positive selection activity, providing a summary view of threats that were found in files that passed through the system.

A file is processed for positive selection according to the policy. A threat is detected regardless of the policy, whether the file was blocked or not.

There can be more than one recent activity message for a single file if it contains more than one threat. For example, the file can be both fake and contain a suspicious macro.

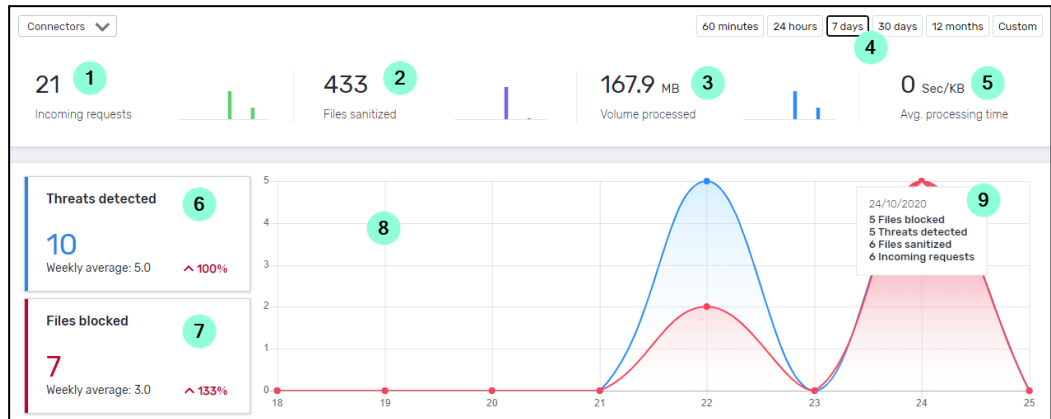

From the navigation pane on the left, click **System Activity**.

- **Central pane:** Displays statistics about the files that have gone through the system.
- **Right pane:** (Recent Activity) Displays a summary of the last ten files that were blocked.

3.1.1 Period Summary

The top area of the System Activity page is a summary of the selected period.

The following statistics are displayed:

Element	Meaning	Notes
1	Total number of requests incoming to the Positive Selection Engine.	A single, flat file, or a nested archive are both single requests.
2	Total number of files that were processed by the Positive Selection Engine.	The number includes root files and nodes.
3	Total volume that was processed by the Positive Selection Engine.	
4	The selected time period.	See Periods on the next page .
5	Average time, in kilobytes per second for processing each item in the volume displayed.	
6	Total number of threats detected, with the average.	The average is calculated according to the period currently selected: an hourly average in the case of a 60-minute period, a daily average in the case of a 24-hour period, and so on.
7	Total number of files blocked, with the average.	Clicking on Threats Detected and Files Blocked displays the threats and blocked files in the Explore Incidents view. For more information, see Exploring Incidents on page 33 .
8	Graph showing threats detected and files blocked over the current time period.	
9	Summary for a specific time within the period.	

Periods

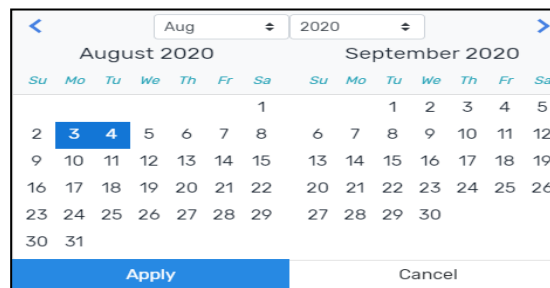

The statistics and graphs that are shown in the central pane of the System Activity page relate to the period that is currently selected. You can select a predefined period by clicking its button or define a custom period.

Votiro's Secure File Gateway provides the following predefined periods:

Period of Processing Activity	Meaning
60 minutes	The information is for the period starting 60 minutes earlier until the current time.
24 hours	The information is for the period starting from the beginning of the current hour, 24 hours earlier, until the end of the current hour.
7 days	The information is for the seven days that end at 23:59 of the current day.
30 days	The information is for the period starting from the current date, one month earlier, until the end of the current day.
12 months	The information is for the period starting from the beginning of the current month, one year earlier, until the end of the current month.

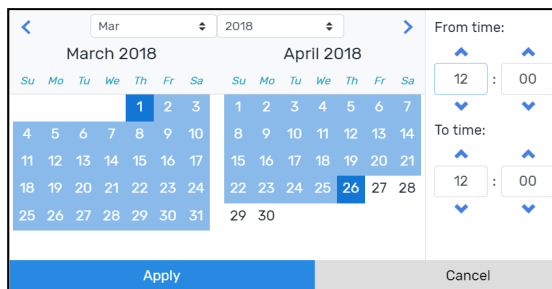

Defining a Custom Period

1. Click **Custom** to display the period selector.

2. Navigate to the desired start month by clicking the right and left arrows or by selecting a month and year from the lists.
3. Select a start date.
4. Navigate to the desired end month.
5. Select an end date.
6. Select a time period.

The selected period is highlighted.

7. Click **Apply**

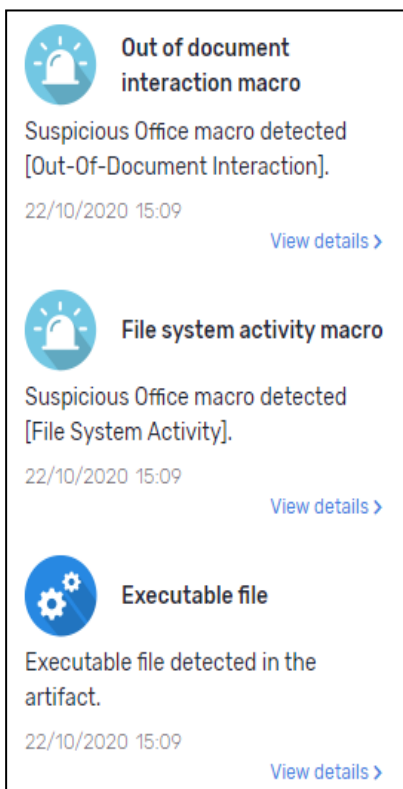

The custom period is displayed in the top left corner of the window:

Statistics and graphs update to show information for the custom period.

3.1.2 Viewing Recent Activity

The Recent Activity pane displays the ten most recent file events.

Click **View Details** to view detailed information about the file, as described in [Viewing Detailed File Information on page 31](#).

3.1.3 Viewing Top File Types

The Management Dashboard provides a graphic representation of the top five file types that have been processed during the selected period. The representation is according to percentages.

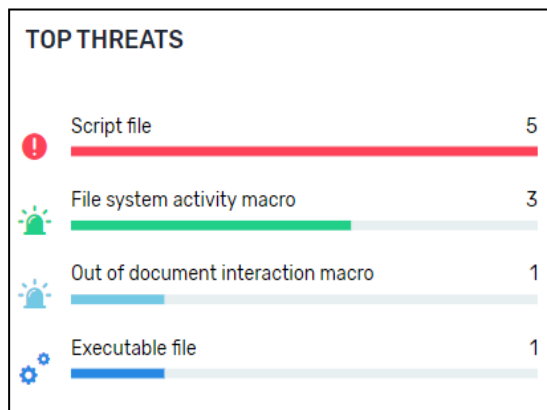

Click an area to display the related list of files in the Explore Incidents page.

For more information on exploring incidents, see [Exploring Incidents on page 33](#).

3.1.4 Viewing Top Threats

The Management Dashboard provides a bar chart representing the top five file threats that were detected during the selected period. The representation is according to the number of threats that were found.

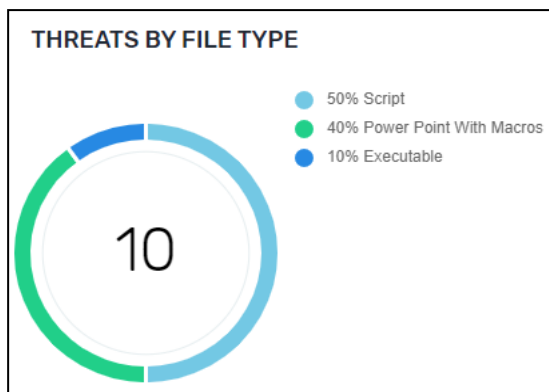

Click an item to display the related list of files in the Explore Incidents page.

For more information on exploring incidents, see [Exploring Incidents on page 33](#).

3.1.5 Viewing Threats by File Type

The Management Dashboard provides a pie chart representing the top five threats by file type that were detected during the selected period. The representation is according to the relative percentages of file types.

Click an area to display the related list of files in the Explore Incidents page.

For more information on exploring incidents, see [Exploring Incidents on page 33](#).

3.1.6 Filtering Lists of Files in Storage

You can view a full list of filtered files that match an area of the System Activity page:

In the System Activity view, click	To see detailed file information in the Explore Incidents page about
Threats Detected	All threats that were detected.
Files Blocked	All files that were blocked.
A type in the Top File Types	All the files of the type selected.
A type in the Top Threats	All the files of the type selected.
A type in the Threats by File Type	All the files of the type selected.

In addition, clicking **View details** for a file in the **Recent Activity** panel displays details about the specific file in the Detailed File Information window, see [Viewing Recent Activity on page 29](#).

For more information about the Explore Incidents page, see [Exploring Incidents on page 33](#).

3.1.7 Viewing Detailed File Information

Detailed file information is displayed when you click **View Details** in the Recent Activity pane of the System Activity page, or **Details** for a file in the Explore Incidents page.

The screenshot displays the Votiro Management Dashboard interface. It is divided into several sections:

- FILES (1):** A file tree view showing a folder named "Auto execution + FileSystem macros #2.pptm" containing files like Content_Types.xml, zrels, viewProps.xml, tableStyles.xml, presProps.xml, revisionInfo.xml, presentation.xml, thumbnail.jpeg, and app.xml.
- File actions (2):** A dropdown menu for performing actions on the selected file.
- FILE INFO (3):** A panel showing details for the selected file: "Auto execution + FileSystem macros #2.pptm". It lists File Type (Power Point With Macros), Original Item Hash, Connector Name (King-FC), and Connector Type (File Connector).
- SANITIZATION LOG (4):** A log showing the sanitization process. It includes start and end times (22/10/2020 | 15:09:31 and 15:09:36) and a total sanitization time of 4.7 seconds. The log entries describe the upload, recognition of the file as a Power Point With Macros, and its original publication.
- THREATS DETECTED (5):** A summary section showing 42 files sanitized using the "Default Policy" and 1 threat detected. A specific threat is identified as "Suspicious File System Activity Macro detected in Auto execution + FileSystem mac..."

Element	Description
1	<p>Files:</p> <p>Shows details of the file that you clicked in a previous window, in bold. The file is shown within the tree of its parents and children. The root is at the top. Scroll up or down in the pane; click the arrows to the left of the filenames to collapse and expand the nodes, as needed. Blocked files are shown in red.</p>
2	<p>The File actions list lets you perform the following actions for the file:</p> <ul style="list-style-type: none"> ■ Explore Incidents. See Exploring Incidents on the next page. ■ Download the original file. See Performing Actions on Files on page 35. ■ Download the processed file. See Performing Actions on Files on page 35. ■ Release the original file if it was blocked. See Releasing the Original Version of a Blocked Email on page 35.
3	<p>File Info:</p> <p>Provides details about the file that is currently selected in the left pane.</p> <p>For all file types, the following is provided:</p> <ul style="list-style-type: none"> ■ File icon ■ File name, or (in the case of an email) the subject ■ File type ■ Hash <p>Additionally, for email files (EML and TNEF formats), the following is displayed:</p> <ul style="list-style-type: none"> ■ From ■ To ■ CC ■ Received date

Element	Description
4	<p>Sanitization Log:</p> <p>Provides sanitization log events that relate to the file that is currently selected in the left pane:</p> <ul style="list-style-type: none"> ■ The date and time that positive selection processing began. ■ The date and time that positive selection processing ended. ■ A list of events during the positive selection processing of the selected file. ■ The total time taken to positive selection processing the selected file.
5	<p>Threats Detected:</p> <p>Provides summary information about the entire tree – root and nodes – that is currently displayed in the left pane:</p> <ul style="list-style-type: none"> ■ The total number of files that were processed. ■ The total number of threats detected. ■ A graphic, clickable representation of each threat is presented alongside.

3.2 Exploring Incidents

The Explore Incidents page provides a deeper look at files that were processed for positive selection or blocked by the Positive Selection Engine, and that are currently stored on the server.

From the Explore Incidents page, you can download the original and processed files, as well as release files that have been blocked.

Accessing Explore Incidents

From the navigation pane on the left, click **Explore Incidents**. The *full* list of incidents that occurred in the last seven days is displayed.

Or

In the System activity view, click any of the following to see *the related details* in the Explore Incidents page:

- Threats detected
- Files blocked
- Top file types
- Top threats
- Threats by file types

For example, if you click **Files blocked** in the System activity page, the Explore Incidents page displays a filtered list of the files that were blocked.

Request date	File name	Subject	From	To	Cc	Connector type	Connector name	Blocked files
10/2020 17:44	JS with 3js chars.js					None		1
24/10/2020 17:44	Ply with 3js chars.py					None		1
24/10/2020 17:44	Batwith3jsChars.bat					None		1
24/10/2020 17:43	CMD with 3js chars.cmd					None		1
24/10/2020 17:43	PHP with 3js chars.php					None		1
22/10/2020 15:09	Auto execution + FileSy...					File Connector	King-FC	
22/10/2020 15:09	AutoExecution + FileSy...					File Connector	King-FC	
22/10/2020 15:09	Auto execution + Out of...					File Connector	King-FC	
22/10/2020 15:09	FileSystem + AutoExec...					File Connector	King-FC	
22/10/2020 15:09	vs_community_...9663...					File Connector	King-FC	1

Use this page to explore incidents (blocked and processed files) that occurred in the system. The page provides the following features:

Element	Description
1	Displays the file name, together with the date and time of the positive selection request. Double-click any file or click Details to see the file details in the Detailed View window.
2	Filters the list of files according to period and status. See Using Filters on the next page .
3	Perform actions on files. See Performing Actions on Files on the next page .
4	Perform a search on all the incidents in the blog. See Searching Positive Selection Requests on page 36 .

3.2.1 Understanding File Details

The positive selection requests (root files) that are currently stored on the Management server are listed in the main pane of the Explore Incidents page.

The following details are displayed for all requests:

- Request date
- File name: Root request file name.
- Connector type
- Connector name
- Blocked files: Number of files in the file tree that were blocked.

For emails, additional details are shown:

- Subject
- From
- To
- CC

Note

The displayed requests might be filtered according to the manner in which you accessed the page. See [Accessing Explore Incidents on page 33](#).

To view file details, double-click any file or click **Details** in the positive selection request line. For more information, see [Viewing Detailed File Information on page 31](#).

3.2.2 Using Filters

You can filter the file list in the following ways:

- Select from the **Status** list to view all files, blocked files, or processed files.
- Select an option from the **Time** list to filter according to a specific time period. Select **Custom** to define a range of dates. For instructions on how to define a custom period, see [Defining a Custom Period on page 28](#).
- If you have more than one Secure File Gateway Connector installed, you can filter the file list by connector type using the **Connector** list.

3.2.3 Performing Actions on Files

From the Explore Incidents page you can perform the following actions on the files in the blob:

- Download the file as it was before it was processed for positive selection, by clicking **Download Original**.
- Download the processed version of the file by clicking **Download sanitized**.
- Release an original file that was blocked.

Releasing the Original Version of a Blocked Email

If an email has been blocked, you can release it from the blob and send it to one or more email recipients.

Usually, this procedure is performed by IT and only under unusual circumstances.

Note

To enable the release of blocked files, you must first configure the following system settings:

- SMTP Server location
- SMTP Server port
- SMTP Server username
- SMTP Server password

For more information, see [Configuring System Settings on page 37](#).

- If the released file is of type EML, the original sender's email address appears in the email that contains the attachment.

- If the released file is of another type, the email address of the user defined for the SMTP Server username setting appears as sender in the email that contains the attachment.

To release a blocked email:

1. Click an email file in the list of blocked files, then click **Release Original**.

The following dialog is displayed:

The dialog shows the same email addresses as were included in the original email, as well as their original designations: To, Cc, or Bcc.

2. Accept the email addresses that are displayed or delete one or more, as needed. You cannot add email addresses.
3. Click **Release** to send the email.

Releasing the Original Version of a Blocked File

If an file has been blocked, you can release it from the blob and send it to the OUT folder configured in Secure File Gateway for Web Downloads.

Usually, this procedure is performed by IT and only under unusual circumstances.

Note

To enable the release of blocked files, you must first configure the Management Platform in Secure File Gateway for Web Downloads.
For more information, see Secure File Gateway for Web Downloads.

To release a blocked file, click a file in the list of blocked files, then click **Release Original**.

The original file is sent to the OUT folder.

3.2.4 Searching Positive Selection Requests

You can search all the positive selection requests that are shown in the Explore Incidents page using the search bar. You can search by the following details:

- From (email only)

- To (email only)
- Subject (email only)
- Item ID: Specify an item ID in GUID (globally unique identifier) format.

This feature is useful for releasing a specific blocked files (see [Releasing the Original Version of a Blocked Email on page 35](#)). For example: An email that contains a file you are expecting has been blocked by Secure File Gateway. As the recipient, you receive an email notification. The PDF file that is attached to the email message contains an item ID, such as the following:

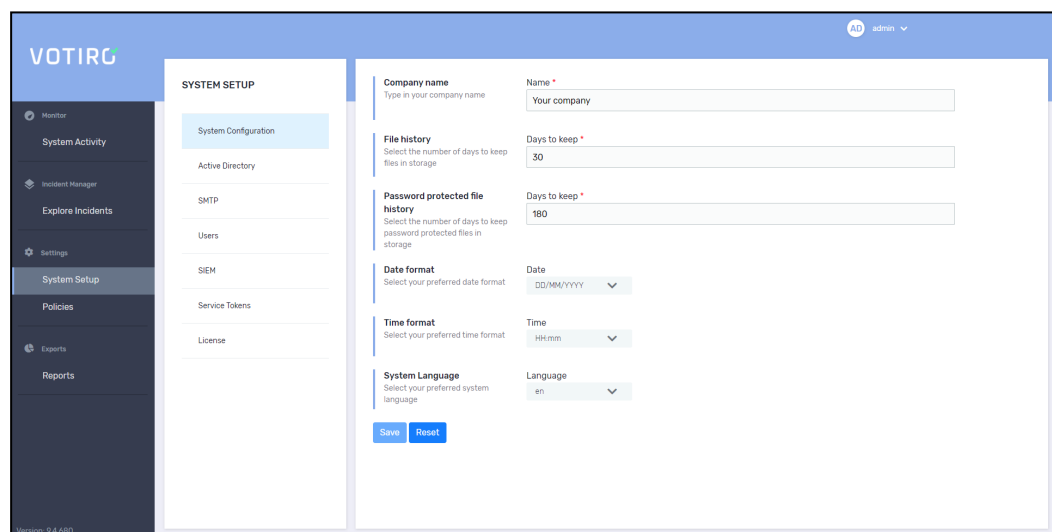

24c5e7cf-b8f8-4f64-a945-39c1a157a896

To release the blocked file, copy and paste the item ID into the search bar and press Enter to display the file in the Explore Incident page. Select the file and click **Release original**.

- Positive Selection request file name

3.3 Configuring System Settings

Use the System Setup page to configure settings in Votiro's Management Dashboard.

There are several active tabs in this view:

- [System Configuration Tab](#)
- [Active Directory Tab](#)
- [SMTP Tab](#)
- [Users Tab](#)
- [SIEM Tab](#)
- [Service Tokens Tab](#)
- [License Tab](#)

3.3.1 System Configuration Tab

The screenshot shows the 'SYSTEM SETUP' section with 'System Configuration' selected. The main configuration area includes:

- Company name:** A text input field with the placeholder 'Your company'.
- File history:** A text input field with the value '30'.
- Password protected file history:** A text input field with the value '180'.
- Date format:** A dropdown menu showing 'DD/MM/YYYY'.
- Time format:** A dropdown menu showing 'HH:mm'.
- System Language:** A dropdown menu showing 'en'.

At the bottom of the configuration area are 'Save' and 'Reset' buttons.

The System Configuration tab contains the following fields:

Field	Description
Company name	Specifies the name of your organization. The company name appears in activity reports. For more information, see Generating a Summary Report on page 60 .
File history	Specifies for how many days the system saves files. The default is 30.
Password protected file history	Specifies for how many days the system saves password-protected files. The default is 180. Note After the configured period, the original file is deleted and cannot be retrieved through the dashboard.
Date format	Select your preferred date format for the display of information in the dashboard --either MM/DD/YYYY or DD/MM/YYYY.
Time format	Select your preferred time format for the display of information in the dashboard -- either a 12-hour clock or 24-hour clock format.
System Language	Select your preferred language. To add languages to the list you must translate Dashboard dictionary and upload the translation.

3.3.2 Active Directory Tab

The Active directory tab contains the following fields:

Field	Description
Active Directory location	Specifies the Active Directory server that validates login.
Active Directory server port	Specifies the Active Directory server port.
Active Directory user group	Specifies the name of the Active Directory group. Only users that belong to the predefined Votiro_Users group in Active Directory can log onto Votiro Management Dashborad.
Active Directory username	Specifies the login username for the Active Directory server. Select one of two formats to use: <ul style="list-style-type: none"> ■ DOMAIN\UserName - For example, VT\Jane.Smith ■ UserName@FQDN - For example, Jane.Smith@Votiro.com Key: <i>DOMAIN</i> - the NetBIOS domain name <i>UserName</i> - the login name of the user <i>FQDN</i> - the domain name in full
Active Directory user password	Specifies the login password for the Active Directory server.
SSL Usage	Specify whether to use SSL.

Note
 Before saving changes test the connection to Active Directory. Click [Test connection](#).

3.3.3 SMTP Tab

All SMTP settings are required to enable Management Platform features that rely on email. Configure SMTP settings to:

- Release original files from the blob. For more information, see [Releasing the Original Version of a Blocked Email on page 35](#).

The SMTP tab contains the following fields for configuring the connection to an SMTP server:

Field	Description
SMTP Server address	Specifies the SMTP server that relays notifications from the Platform Management to users in your organization.
SMTP Server port	Specifies the SMTP server port.
SMTP Server email	Specifies the email address of the SMTP server user.
SMTP Server password	Specifies the password for the SMTP server user.

To test the SMTP settings, click [Send test email](#) at the bottom of the screen.

- If the settings are valid, a verification code is displayed in the Management Dashboard.
 The same code appears in an email message that is sent to the address you specified.
- If the settings are invalid, an error is displayed below the button.

3.3.4 Users Tab

The Users tab enables you to change the password for the Votiro Admin role and define permissions for users of the Management Platform.

The Users tab contains the following fields:

Field	Description
Votiro Admin	<p>The Votiro Admin role provides direct administrative access to Secure File Gateway, independent of Active Directory.</p> <p>To change the Votiro Admin password:</p> <ol style="list-style-type: none"> 1 Click . 2 Enter the Current Password and the New Password twice. 3 Click OK to save. <div data-bbox="703 1178 1339 1570" style="border: 1px solid black; padding: 10px; margin-top: 10px;"> <p style="text-align: center;">Type In Your Current Admin Password And Choose New One</p> <p>Current Password <input type="password"/></p> <p>New Password <input type="password"/></p> <p>New Password Again <input type="password"/></p> <p style="text-align: center;"> <input type="button" value="OK"/> <input type="button" value="CLOSE"/> </p> </div>

Field	Description
Active Directory Group	<p>Users must be in the Votiro_Users Active Directory group.</p> <p>The three levels of permission are:</p> <ul style="list-style-type: none"> ■ SOC: users will only be able to view the dashboard and use the TEST FILE functionality. They will not have access to personal data, or be able to change settings. ■ Helpdesk: users will be able to manage the positive selection process and release of personal files and emails, in addition to SOC permissions. ■ Administrator: users will have access to the entire system, including personal files and emails. They have permission to edit policy configurations and system settings, in addition to Helpdesk permissions. <p>To set a user's permissions on the bar to the right of the Username, click the circle above the permission level to be granted. The circle changes to blue.</p> <div data-bbox="699 943 1163 1037" style="border: 1px solid black; padding: 5px; margin: 10px 0;"> </div> <div data-bbox="703 1077 1417 1285" style="background-color: #f0f0f0; padding: 10px; margin-top: 10px;"> <p>Note</p> <p>The system must have a minimum of one Administrator user setup in the Active Directory Group for Votiro users.</p> <p>A warning message appears if you attempt to Save the settings with no user set with Administrator permissions.</p> </div>

3.3.5 SIEM Tab

Use the SIEM tab to configure settings for the saving Management event logs in a SIEM.

SYSTEM SETUP

- System Configuration
- Active Directory
- SMTP
- Users
- SIEM
- Service Tokens
- License

SIEM Server address IP / Hostname *

Type in your organization SIEM server address

SIEM Server port Port *

Type in your organization SIEM server port

The tab contains the following configuration fields:

Field	Description
SIEM Server address	Address of the SIEM system collector service. Specify a hostname where the address represents a fully qualified hostname or an IPv4 address. The default is empty. When the address is empty, the server uses its own IP as an address.
SIEM Server port	Specifies the UDP port of the SIEM system collector service. Specify a positive integer between 1 and 65535. The default is 514. For more information about SIEM logging in Management, see Sending Logs to SIEM in CEF Format on page 67 .

3.3.6 Service Tokens Tab

Use the Service Tokens tab to view existing service tokens and to create a new service token. Service tokens allow other services to communicate with Votiro's Secure File Gateway.

To create a new service token:

1. Click **Create New**.
2. Complete **Create New Service Token** fields.

Field	Description
Issued To	Specifies the name you have given to the service token.
Expiration Time	Specifies the date the service token will expire.

Create New Service Token

Issued To

Expiration Time

< Aug 2020 >

```

4. A service token is generated. You must copy this service token to the relevant bearer authentication headers.

IMPORTANT!
The service token generated is not stored by Votiro's Secure File Gateway. You must copy it immediately.

5. Click **OK**.
6. A list of service tokens created are displayed on the Service Token tab.

ID	3ff7eebd-c40e-4358-8554-49e01a26ce46
Issued To	King VA
Created At	05/08/2020 18:52
Expiration Time	01/08/2023
<input type="button" value="Revoke"/>	

Field	Description
ID	The ID of the service token is automatically added.
Issued To	Specifies the name you have given to the service token.
Created At	A DateTime stamp is automatically added to the service token.
Expiration Time	Specifies the date the service token will expire.

To withdraw a service token, click **Revoke**.

3.3.7 License Tab

Use the License tab to generate a license request, import a license key, know the date the license will expire and keep track of the number of files processed against the quota.

The tab contains the following configuration fields:

Field	Description
License expiration date	<p>When a valid license key is imported the expiration date automatically updates to the date when processing of files will stop.</p> <p>At time of installation the default license is valid for 24 hours. During this time files will be processed and a license should be requested.</p>
Sanitization quota	<p>The first figure represents the number of files that have been processed. The second figure represents the licensed quota of files to be processed.</p>
Generate license request	<p>Click Generate to produce a license request package. The file licensePackage.zip is generated and located in your downloads folder.</p> <p>Pass this file to Votiro Support. A license key will be generated and returned to you within 24 hours of receipt of the request.</p>
Import license	<p>Enter the license key provided by Votiro Support and click Import. Successful validation automatically updates License expiration date and Sanitization quota information. The license key disappears.</p> <div style="background-color: #f0f0f0; padding: 5px;"> <p>Note</p> <p>Votiro's Secure File Gateway is activated up to five minutes after the license key import.</p> </div>

3.4 Managing Positive Selection Policies

A positive selection policy defines the manner in which an organization handles a file matching a set of criteria that enters its network. The policy can determine how files are processed, including whether files are blocked or permitted.

For example, your organization’s positive selection policy might comprise the following rules:

- Process all image files and rasterize vector images.
- Block all fake files and customize the block message that the end user receives to be “Due to a recent spike in threats associated with fake files, the company has decided to block them.”
- Process all PDF files, except if they are larger than 25 MB. In such an event, the file is blocked.

Votiro's Secure File Gateway uses policy definitions that are defined in the Management Dashboard.

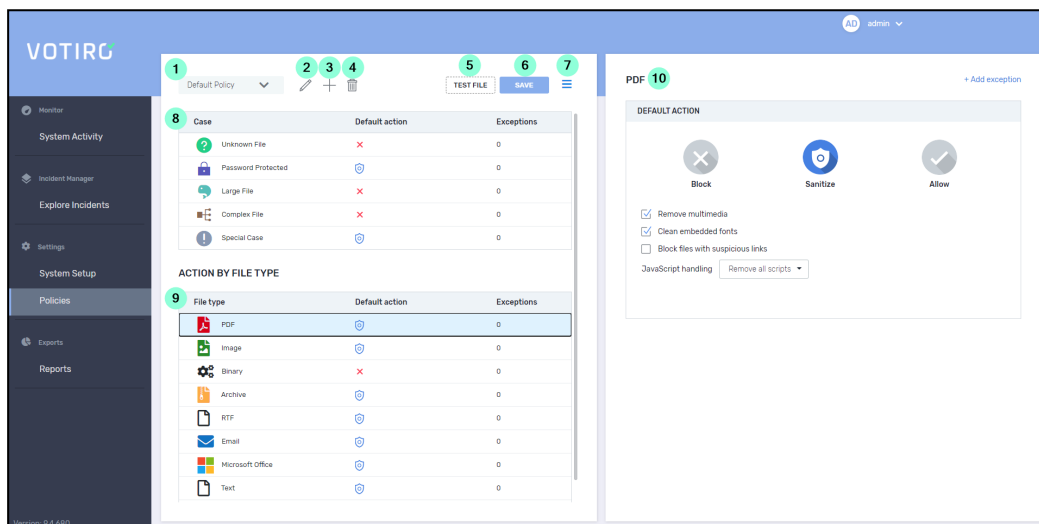

If you do not create a customized policy, Secure File Gateway uses a set default policy.

If you have custom, XML-based policy definitions, you can load these to the Management Dashboard as special cases. To learn how to include special cases, see [Defining Policy Based on Special Cases on page 56](#).

Positive Selection Policies Dashboard

The Policies view in Votiro's Management Dashboard lets you create, edit, and manage the positive selection policies that operate in the Positive Selection Engine.

From the navigation pane on the left, click **Policies**.

Element	Meaning
1	The name of the currently displayed policy. To display a policy, select from the list of defined policies.
2	Edit the policy name.
3	Add a new policy.
4	Delete current policy.
5	Select file to test policy.
6	Save current policy.
7	Import/Export policy file.
8	Displays the details of the selected policy by case.
9	Displays the details of the selected policy by file type.
10	Displays details of the item that is selected on the left. For each case or action, you can define how it must be handled.

Note

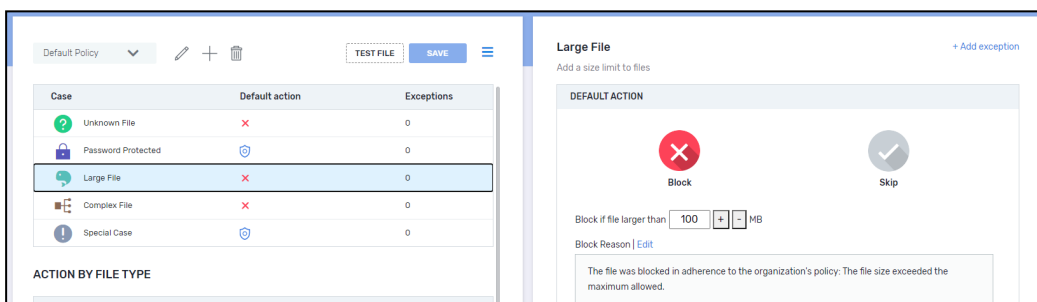

Change made in policies are updated in the Positive Selection Engine every few seconds. Once updated in the Positive Selection Engine, it is available to Secure File Gateway reference clients, such as Secure File Gateway for Email or Secure File Gateway for Web Downloads.

3.4.1 File Blocking

When you configure a policy to block a file, no other policy rule is applied on the file. A block file containing information about the blocked file and the reason it was blocked replaces the original file. You can accept the block file default text or edit it.

A block file is a document that replaces an original file that was blocked. The block file is attached to an email and can be customized for each company and for each set of criteria.

3.4.2 Defining Policy by Case

When defining a policy by case, you can perform the following actions:

- Block the file
- Skip the file
- Add one or more exceptions to the policy. For more information, see [Defining Exceptions on page 56](#).

If you choose to block the case, you can:

- Set additional options if they are provided (as in the image above)
- Edit the default block reason text

After you save the settings for the case, the display updates to show the action symbol in the Default Action column and the number of exceptions in the Exceptions column.

The following table describes the positive selection processing options that are available for each case:

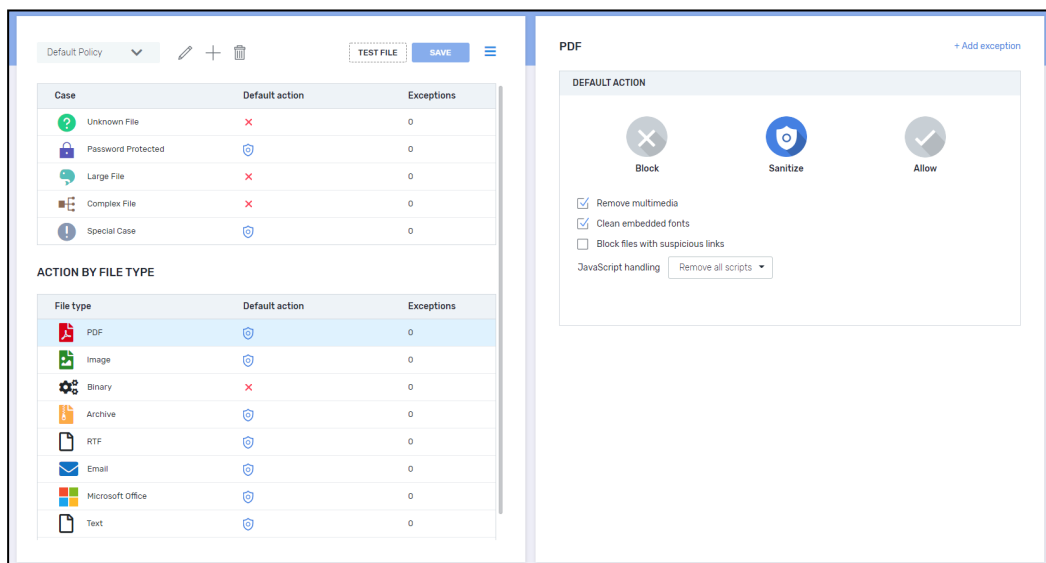

Table 5 Positive Selection Processing Options for Cases

Case	Description	Processing Options
Unknown File	Specifies how to handle data files or unidentified file types.	<p>You can block or skip these.</p> <p>If you select Skip, the unknown file is not processed for positive selection and the original version will reach the destination folder.</p>

Case	Description	Processing Options
Password Protected	Specifies how to handle password-protected files.	<p>You can block or process these files. By default, the files are processed for positive selection.</p> <ul style="list-style-type: none"> ■ Return file by email with User Message: Allows you to return a password protected file by email. Accept the default text notification message, or edit it. ■ Block unsupported files with Block Reason: Allows you to block unsupported files (such as Visio files). Accept the default text notification message, or edit it. <p>When the files are blocked, Secure File Gateway issues a block-file containing the reason it was blocked. The notification contains a link that opens a web page where the password can be entered. When the correct password is entered, the blocked file returns to the storage server, and is processed. The processed file is then downloaded to the user's computer, or sent by email as an attachment.</p> <div style="background-color: #f0f0f0; padding: 5px; border: 1px solid #ccc;"> <p>Note</p> <p>This feature supports the following file types only: PDF, ZIP, 7zip, RAR, DOC, DOCX, DOT, DOTX, DOCM, DOTM, XLS, XLT, XLSX, XLTX, XLSM, PPT, PPS, POT, PPTX, PPSX, POTX and PPTM. It does not work on other file types that can be protected by a password, such as Visio files.</p> </div> <p>Instructions for Email User</p> <p>The Secure File Gateway administrator should communicate the following information and instructions to the users.</p> <p>An email message with password protected files attached can be processed for positive selection and returned as an email attachment, or as a download. The user receives a message on screen that a password protected file has been received, with the option to enter the password, then click Get File.</p> <p>The password protected file is processed for</p>

Case	Description	Processing Options
		<p>positive selection, then attached to the email. This is distributed to all named recipients. If Secure File Gateway has already processed password protected files, additional users requesting files to be processed will be advised that this has already taken place.</p> <div style="background-color: #f0f0f0; padding: 5px;"> <p>Note This feature supports the use of one password per email.</p> </div>
Large File	Specifies how to handle large files.	<p>You can set the minimum size of files you want to block.</p> <p>When this option is checked, for every file that Secure File Gateway blocks, it issues a block-file containing the reason it was blocked. Accept the default text or edit it.</p>
Complex File	Specifies how to handle nested files.	You can set a layer number. Files that are found in that layer or deeper are blocked.

3.4.3 Defining Policy by File Type

When defining a policy by file type, you can perform the following actions:

- Block the file under all conditions. You can edit the default notification about the blocked file.
- Process the file for positive selection using default settings. You can modify the default behavior by setting options when they are provided (for example, as in the image above). You can also edit the default block reason text.

- Allow the file under all conditions.
- Add one or more exceptions to any of the previous three settings. For more information, see [Defining Exceptions on page 56](#).

After you save the settings for the file type, the display updates to show the action symbol in the Default Action column and the number of exceptions in the Exceptions column.

The following table describes the processing options that are available for each file type:

Table 6 Positive Selection Processing Options for File Types

File Type	Description	Processing Options
PDF	Specifies how to process PDF files.	<p>By default, these files are processed for positive selection.</p> <ul style="list-style-type: none"> ■ Remove multimedia: Specifies whether multimedia such as embedded video, audio, 3D annotations, and rich media annotations must be removed. Default is checked. ■ Clean embedded fonts: Specifies whether embedded fonts must be processed. Default is checked. ■ Block files with suspicious links: Performs a check of all links in the form HTTP:// and HTTPS:// in a PDF document. If any link is found to be suspicious, it is removed from the file. When this option is checked, for every file that the Positive Selection Engine blocks, it issues a block-file containing the reason it was blocked. Accept the default block reason, or edit it. Default is unchecked. ■ JavaScript handling: Determines how JavaScript, if found in the PDF file, is handled. <ul style="list-style-type: none"> ◆ Don't do anything ◆ Remove only suspicious scripts ◆ Remove all scripts (this is the default) ◆ Block documents containing suspicious scripts

File Type	Description	Processing Options
Image	Specifies how to handle image files.	<p>By default, these files are processed for positive selection.</p> <ul style="list-style-type: none"> ■ Add micro-changes: Adds security noise to images during processing. Default is checked. <div style="background-color: #f0f0f0; padding: 5px; margin: 5px 0;"> <p>Note Increasing the noise level might enlarge the processed files, particularly in the case of png files. Unselecting noise level (off) usually preserves an image file size.</p> </div> <ul style="list-style-type: none"> ■ Remove metadata: Removes EXIF metadata from JPEG and TIFF images. Default is unchecked. ■ Max compression for lossless formats: Compresses lossless image formats (PNG, BMP, and RAW) by 100%. Default is checked. ■ Compression level: The processed image is compressed to preserve a reasonable image file size. You select one of five compression levels (from 0% to 100%) that trade off file size with image quality – the larger the file, the higher the image quality. Default is 25%.
Binary	Specifies how to handle binary files.	The processing option is not relevant to managing binary files. You either block binary files or allow them.
Archive	Specifies how to handle archives.	<p>By default, these files are processed for positive selection.</p> <p>Block zip bomb: Detects and blocks zip files with abnormal compression ratio. These might pose a denial of service threat, consuming system resources such as CPU or disk. Any zip files with compression ratio higher than 99.8% will be considered a zip bomb and be blocked. Default is checked.</p>
RTF	Specifies how to handle RTF files.	By default, these files are processed. There are no specific processing options.

File Type	Description	Processing Options
Email	<p>Specifies how to handle email files. Positive selection processing is on EML files and their attachments.</p> <div style="background-color: #f0f0f0; padding: 5px;"> <p>Note Each attached file is processed recursively by running all policy rules on it.</p> </div>	<p>By default, these files are processed for positive selection.</p> <ul style="list-style-type: none"> ■ Block files with suspicious links: Performs a check of all links in the form HTTP:// and HTTPS:// in the body and attachments of an email. If any link is found to be suspicious, it is removed from the file. Default is unchecked.

File Type	Description	Processing Options
Microsoft Office	<p>Specifies how to handle Microsoft Office files.</p> <p>Positive selection processing applies to Microsoft Office files and their embedded objects.</p> <div data-bbox="552 1099 895 1267" style="background-color: #f0f0f0; padding: 5px;"> <p>Note Each attached file is processed recursively by running all policy rules on it.</p> </div>	<p>By default, these files are processed for positive selection.</p> <ul style="list-style-type: none"> ■ Block files with suspicious links: Performs a check of all links in the form HTTP:// and HTTPS:// in Microsoft Word files. If any link is found to be suspicious, it is removed from the file. <div data-bbox="911 584 1414 719" style="background-color: #f0f0f0; padding: 5px;"> <p>Note This option is available for DOC/DOCX/XLSX file types only.</p> </div> <p>Default is unchecked.</p> <ul style="list-style-type: none"> ■ Macro handling. In the list, choose one of the following: <ul style="list-style-type: none"> ◆ Don't do anything ◆ Remove only suspicious macros: Remove all macros only if any suspicious code is found. ◆ Remove all macros: Remove all macros from the document. This is the default option. ◆ Block documents containing suspicious macros: Block the entire document if suspicious code is found in the macro. <div data-bbox="911 1290 1414 1532" style="background-color: #f0f0f0; padding: 5px;"> <p>Note Excel files with "4.0 macro" (also known as "sheet macro") are automatically blocked. It is common practice to use VBA macros. Excel files with VBA macros are checked for suspicious code (see options above).</p> </div> <ul style="list-style-type: none"> ■ Remove metadata: Removes metadata, such as Author, Company, LastSavedBy, and so on. Default is unchecked. ■ Remove printer settings: Removes the printerSettings1.bin (printer settings) embedded in a .xlsx file. Default is checked.

File Type	Description	Processing Options
Text	Specifies how to handle text files.	By default, these files are processed for positive selection. Block CSV with threat formula: Blocks CSV files that contain formula injections. Default is checked.
Other files	Specifies how to handle unsupported files.	By default, these files are blocked. There are no specific processing options.

3.4.4 Defining Policy Based on Special Cases

You can load a set of special cases – a **custom policy** – that has been created outside the Management Dashboard. This feature is recommended for special needs only . For more information, contact Votiro Support.

3.4.5 Defining Exceptions

You can define one or more exceptions to any case policy or file type policy. Exceptions can be based on the following:

- File type
- File size
- Email (for Secure File Gateway for Email only)
- File extension
- Digital signature

To Define an Exception:

1. From the navigation pane on the left, click **Policies**.
2. Click the case or file type for which you wish to define an exception.
3. In the top right corner, click **Add Exception**. The Define Exception window appears:

Define Exception

Exception will be activated under the following conditions: Clear

✗ IF	File type	Equals	Pdf		
✗ AND	File size	is less than	5	GB	
✗ AND	Email	To	equals	info@abc.com	
✗ AND	File extension	ends with	xism		
✗ AND	Digital signature	is valid			

+

OK
CLOSE

4. Create a condition by selecting values from the lists or by adding free text, as needed.
5. Click the + to add a condition to the exception definition. Click the ✗ sign to delete a condition.
6. Click **OK**.

The exception is added to the right pane. You can further edit it or delete it, as needed.

Defining Exceptions for File Types

File type	Equals	Wmf	
File type	Equals	Other types	1 checked

- Not Discovered Yet
- Unknown
- Empty File
- Directory
- Unrecognized

To specify an exception for one or more file types:

1. In the leftmost list, select **File Type**.
2. In the second list, select **Equals** or **Not Equals**.
3. In the last list, select one or more relevant file types. The list displays the most common ones. To select a type that does not appear, select **Other types**, then, in the additional list that appears, select the types that meet your needs.

Defining Exceptions for File Size

File size	is more than	1	MB
			<ul style="list-style-type: none"> Bytes KB <li style="background-color: #007bff; color: white;">MB GB TB

To specify an exception based on on file size:

1. In the leftmost list, select **File Size**.
2. In the second list, select **Is more than** or **Is less than**.
3. In the input field, type in a numeric value for the size.
4. In the last list, select Bytes, KB, MB, GB, or TB.

Note

- File sizes are measured in bytes.
- Files up to 100 MB can be uploaded for positive selection processing.

Defining Exceptions for Email Senders or Recipients

Email	From	equals	joe@abc.com
Email	From	equals	courses.abc.com
Email	From	include address	abc.com

You can specify any of the following:

- From: For emails from a particular sender, or a specific domain.
- To: For emails to a particular recipient.
- CC: For emails to a particular CC-ed recipient.
- Recipients: For emails to recipients that appear in To, CC, or BCC fields.

Defining Email and Domain Addresses - Full and Partial

You can specify:

- An exact email or domain address by selecting **Equals** or **Not Equals**.
- A partial domain address by selecting **Include address**.

Guidelines and examples:

- Specify a full email address, including the @ sign. For example, *joe@abc.com*.
- Partial email addresses are not accepted. For example, *@abc.com* or *joe@*.
- Specify full or partial domains. For example, *abc.com* or *courses.xyz.info*

Defining Exceptions for File Extensions

To specify a list of file type extensions:

1. In the leftmost list, select **File Extension**.
2. In the second list, select **Ends with** or **Doesn't end with**.
3. In the text field, type in the extensions you need. Separate them with commas. For example: DOC,PDF,XLSX.

Defining Exceptions for Validating Signatures

To specify an exception for a file with a digital signature, select **Is valid** or **Is not valid**.

3.5 Generating Reports

The Reporting feature provides a deeper look at positive selection activity performed by Votiro's Secure File Gateway on files and emails that enter your network.

From the Reporting page in the Management Dashboard, you can generate the following reports:

- [Summary Report](#)
- [Audit Report](#)
- [System Report](#)
- [Diagnostics Report](#)

3.5.1 Summary Report

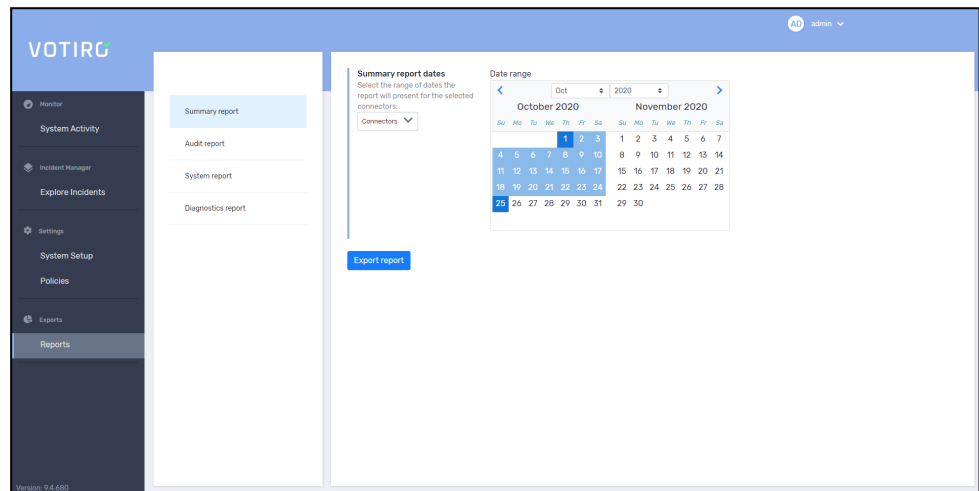

You can generate a summary report of the positive selection processing activity in your organization for a specified period.

The report collects useful data of the activity for all stakeholders. For example, the system administrator can use this report for making data-driven decisions to optimize the company's policy, for maximum security and minimum interference to your business.

The report presents usage and security data in graphic format and also provides tips for optimizing your positive selection processing effort.

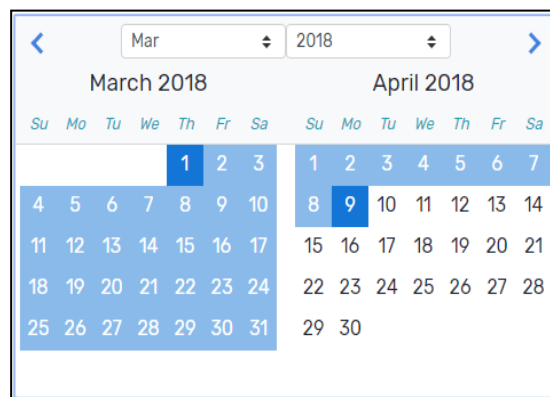

Generating a Summary Report

1. In the navigation pane, click **Reports**.
2. Click **Summary report**.

3. From the **Connectors** list, select the connectors for which to generate the report.
4. In the period selector, navigate to the desired start month either by clicking the right and left arrows or by selecting a month and year from the lists.
5. Click the start date.
6. Navigate to the desired end month.
7. Click the end date.

The selected period is highlighted.

8. Click **Export Report**.

The report is downloaded to your computer.

Summary Report Format and Structure

The report is in PDF format and provides the following information:

- Company name.
- Number of processing requests to Votiro's Positive Selection Engine.
- Number of individual files that were processed Votiro's Positive Selection Engine.
- Number of files that were blocked.
- Number of threats that attempted to enter your organization.
- Number of files that were blocked according to each positive selection policy.
- Number of files that were blocked and that were detected as threats.
- Number of files that were blocked that were not threats.
- Average processing time in seconds/KB.
- File types that passed through the Positive Selection Engine.
- Number of threats that attempted to enter your organization.
- Most threatening file types that were sent to your organization.

3.5.2 Audit Report

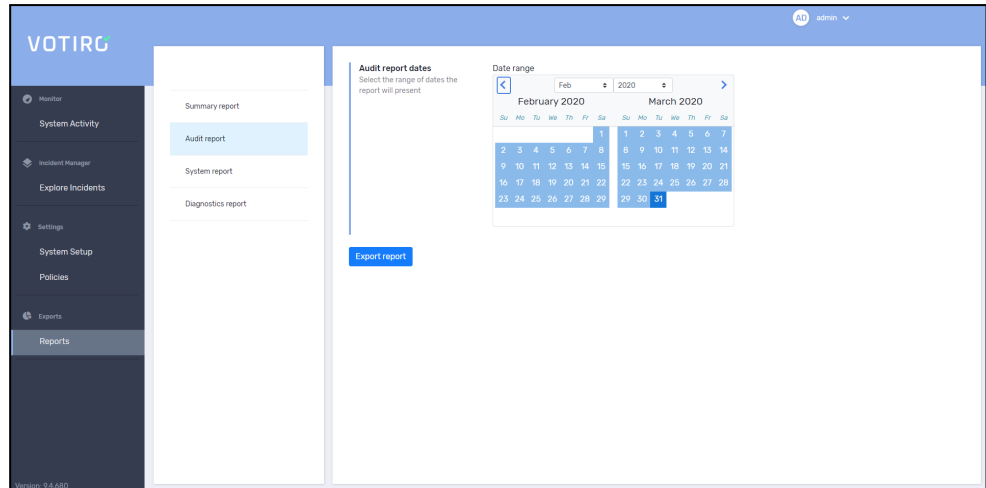

The purpose of this report is to present details of actions performed in the Management Dashboard for audit and tracking.

To protect enterprise privacy, Votiro's Secure File Gateway tracks every login, change, request for file download and other actions that were performed in the Management Dashboard.

You can audit all actions that were performed by users of the Management Dashboard for a specified period. The exported report generated is a CSV file.

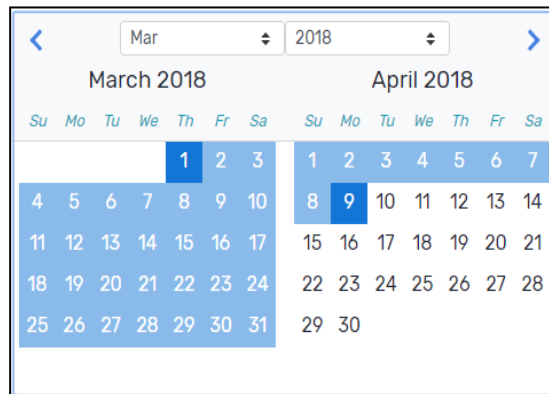

Generating an Audit Report

1. From the navigation pane on the left, click **Reports**.
2. Click **Audit report**.

3. In the period selector, navigate to the desired start month by clicking the right and left arrows or by selecting a month and year from the lists.
4. Click the start date.
5. Navigate to the desired end month.
6. Click the end date.

The selected period is highlighted.

7. Click **Export Report**.

The report is downloaded to your computer.

Audit Report Format and Structure

The audit is in CSV format. The following is an example excerpt as viewed in a spreadsheet application:

1/11/2018 11:52	RonF	LoginEvent	Successful login with Full permissions
1/11/2018 13:05	user1	PolicyAddEvent	A new policy was created policyId: 37a0add2-b521-442c-
1/11/2018 14:46	Default (unauthori	LoginEvent	Successful login with Full permis
1/11/2018 15:07	RonF	LogoutEvent	Logout
1/11/2018 15:41	Default (unauthori	LoginEvent	Successful login with Full permis
1/11/2018 16:02	Default (unauthori	PolicyDeleteEvent	Policy 321_deleted_63676692124 policyId: 3d24ce9e-faca-4004-
1/11/2018 16:02	Default (unauthori	PolicyUpdateEvent	Policy jhg was changed policyId: aab369db-32dd-4bad-
1/11/2018 16:03	Default (unauthori	ConfigurationEvent	3 Configuration record/s were u updates:
1/11/2018 16:03	Default (unauthori	LogoutEvent	Logout
1/11/2018 16:03	user1	LoginEvent	Successful login with Full permis
1/11/2018 16:03	user1	UsersEvent	1 user/s permissions were upda updates: Updated RonF from

Information is provided for the following actions:

- Login
- Logout
- Original file download
- Processed file download
- Release original
- Policy save
- Settings save
- Roles changes
- Report export
- Policy creation

For each action, there is a datestamp (in UTC time) and a username.

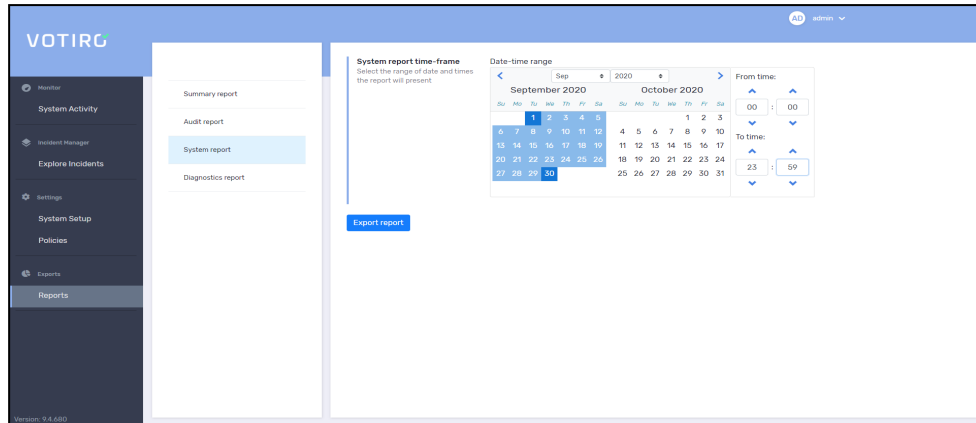

3.5.3 System Report

Votiro's Secure File Gateway tracks system activity and other actions that were performed in the Management Dashboard.

You can generate a report of all system activity performed by users of the Management Dashboard for a specified period. The exported report generates a zip file.

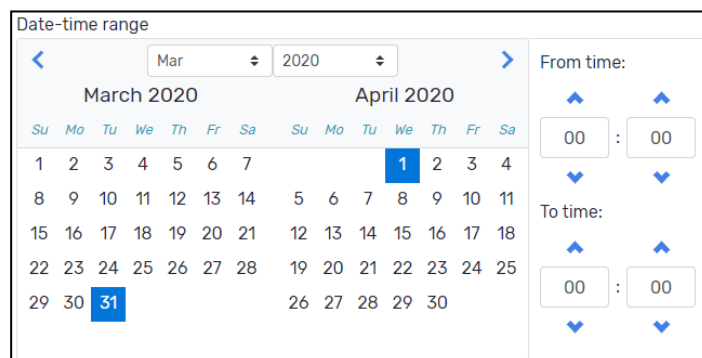

Generating a System Report

1. From the navigation pane on the left, click **Reports**.
2. Click **System report**.

3. In the period selector, navigate to the desired start month by clicking the right and left arrows or by selecting a month and year from the lists.
4. Click the start date.
5. Use the up and down arrows to select a start time. The default is 00:00.
6. Navigate to the desired end month.
7. Click the end date.
8. Use the up and down arrows to select an end time. The default is 00:00.

The selected period is highlighted.

9. Click **Export Report**.

The report is downloaded to your computer.

System Report Format and Structure

The output generated is in zip format. The following is an example excerpt when system files are extracted:

Name	Size	Packed Size	Modified
logs	255 462 505	10 404 200	
votiro1	236 693	35 871	2020-03-31 06:31
votiro3	57 705	6 487	2020-03-31 06:31
votiro4	15 425	1 407	2020-03-31 06:31

These files are password protected and for use by Votiro.

3.5.4 Diagnostics Report

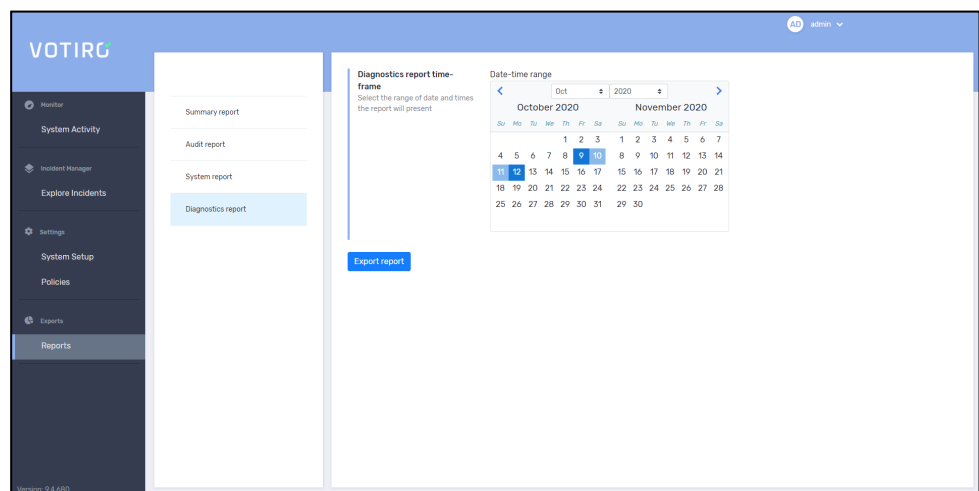

Votiro's Secure File Gateway tracks system activity and other actions performed in the Management Dashboard.

You can generate a diagnostics report of the activity in your organization for a specified period.

The report collects useful data of the positive selection processing activity. The diagnostics files generated are used internally by Votiro for support and research purposes.

Generating a Diagnostics Report

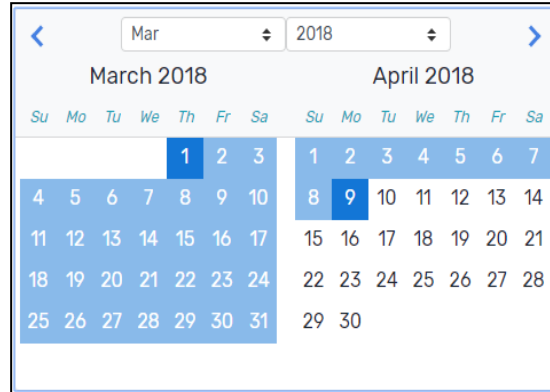

1. In the navigation pane, click **Reports**.
2. Click **Diagnostics report**.

3. In the period selector, navigate to the desired start month either by clicking the right and left arrows or by selecting a month and year from the lists.
4. Click the start date.

5. Navigate to the desired end month.
6. Click the end date.

The selected period is highlighted.

7. Click **Export Report**.

The report is downloaded to your computer.

Diagnostics Report Format and Structure

The output generated is in zip format. The database folder and additional files are password protected. The diagnostics files generated are used internally by Votiro for support and research purposes.

Appendix A Sending Logs to SIEM in CEF Format

Votiro's Secure File Gateway logs can be sent to SIEM in CEF format.

To enable SIEM logging, you must configure it in the report.xml file. The required configuration attributes are:

- **Log message format:** Must be CEF (default).
- **Address:** IP or hostname address for the Syslog server (default value = empty).
- **Port:** Syslog server port. Default port is 514.

An optional configuration attribute is:

- **AppName:** Scanner (default). The malware scanner sends antivirus update messages to SIEM.

Notes

- The IsActivated parameter under SiemSettings must be set to "true" in order for logs to be published.
- For changes in the report.xml file to take effect, you must restart the Votiro.Sanitization.API and Votiro.SNMC Windows services.
- For antivirus messages to be sent to SIEM, you must restart the Votiro Scanner service.

Here is an example of an SIEM message in Votiro's Secure File Gateway:

```
CEF:0|VOTIRO|SDS|7.2.0.289|20020100|Votiro Service Started|5|
rt=Sep 19 2017 05:57:38 dtz=03:00:00 dvchost=VOTIROSWS
msg=Votiro service started.
```

CEF Message Format

The CEF message format is as follows:

```
CEF:Version | Device Vendor | Device Product | Device Version |
Signature ID |Name |Severity | Date and host name extension
```

- **Version.** Always 0.
- **Device Vendor:** Always VOTIRO.
- **Device Product:** Always SDS.
- **Device Version:** The version of Secure File Gateway.
- **Signature ID:** Event ID. Made up of Family Id and Id, where:
 - ◆ Family Id can be one of:
 - 100, in the case of a Trace event.
 - 200, in the case of a System event.

- 500, in the case of an Indicator event.
- 600, in the case of an Internal Trace event.
- ◆ Id is a five-numeral string.
- **Name:** Event Name indicates the type of event. See [Report Events below](#).
- **Severity:** Indicates the urgency of the event.

Table 7 Severity Levels

Level	Severity	Description
0	Verbose	Very fine-grained informational events that are most useful to debug an application.
1	Debug	Fine-grained informational events that are most useful to debug an application.
4	Info	Informational messages that highlight the progress of the application at coarse-grained level. This is the default level.
5	Notice	Informational messages that highlight the progress of the application at the highest level.
6	Warning	Potentially harmful situations.
7	Error	Error events that might still allow the application to continue running.
9	Fatal	Very severe error events that will presumably lead the application to abort.

- **Date and host name extension.** The rest of the extension follows these three values.
 - ◆ **Date.** Timestamp of event occurrence in the system. The extension always begins with three values:
 - rt = receipt time = time the message was first reported
 - dtz = device time zone = abbreviated. See: [Time Zone Abbreviations](#).
 - dvchost is the host name, for example, John-PC
 - ◆ **Host name.** The name of the Secure File Gateway server in which it occurred.
 - ◆ **Extension.** The last value is always msg, which stands for “message” and is the human readable message of the event description. See [Report Events below](#).

Report Events

Event codes respect the following 8-digit scheme:

L L R C C T T R

where L, R, C, T are digits [0-9].

- LL specifies the event main category.
- CC specifies the sub-category.
- TT specifies the specific event type.
- R is reserved for future use and must be ignored.

Examples

- 50020110 represents an Indicator event (LL=50) of category Suspicious Executable File (C=20), specifying that an executable artifact (TT=11) was found.
- 10000010 represents a Trace event (LL=10) of category FTD (C=00), specifying that a discovered file type (TT=01) was found.

Table 8 CEF Message Template Extensions

Category	Event Code	Sub-Category	Event Name	Event Description
Trace	10000010	File Type Discoverer	True File Type	File {FileName} recognized as {FileType}.
Trace	10020100	File Process	File Uploaded	File {FileName} upload for positive selection started.
Trace	10020130	File Process	Child Item Created	New child created for item {ParentItemId}. Child ID: {ChildId}.
Trace	10020110	File Process	Sanitization Complete	File {FileName} sanitization process successfully ended.
Trace	10020200	File Process	File Blocked	File {FileName} blocked as a result of the positive selection process.
Trace	10020300	File Process	Sanitization Timeout	Sanitization of the file {FileName} exceeded the time limit.
Trace	10050000	Blocker	Block - Unknown File (Policy)	File {FileName} blocked due to your organization policy violation [{Policy}] in the sanitization process.
Trace	10050010	Blocker	Block - Large File (Policy)	File {FileName} blocked due to your organization policy violation [{Policy}] in the sanitization process.
Trace	10050020	Blocker	Block - Complex File (Policy)	File {FileName} blocked due to your organization policy violation [{Policy}] in the sanitization process.

Category	Event Code	Sub-Category	Event Name	Event Description
Trace	10050030	Blocker	Block - Binary File (Policy)	File {FileName} blocked due to your organization policy violation [{Policy}] in the sanitization process.
Trace	10050040	Blocker	Block - Other Unsupported File (Policy)	File {FileName} blocked due to your organization policy violation [{Policy}] in the sanitization process.
Trace	10050050	Blocker	Block - DDE (Policy)	File {FileName} blocked due to your organization policy violation [{Policy}] in the sanitization process - DDE detected.
Trace	10050060	Blocker	Block - Macro (Policy)	File {FileName} blocked due to your organization policy violation [{Policy}] in the sanitization process - Suspicious macro detected.
Trace	10050070	Blocker	Block - Suspicious URL (Policy)	File {FileName} blocked due to your organization policy violation [{Policy}] in the sanitization process - Suspicious URL detected.
Trace	10050080	Blocker	Block - Password Protected (Policy)	File {FileName} blocked due to your organization policy violation [{Policy}] in the sanitization process - Password Protected File.
Trace	10050100	Blocker	Block - General (Policy)	File {FileName} blocked due to your organization policy violation {Policy} in the positive selection process.
Trace	10050500	Blocker	Block - Error	File {FileName} blocked due to an error in positive selection process.
Trace	10060100	Password Protected Opener	Password Opened	Password Protected File {FileName} successfully opened.
Trace	10060110	Password Protected Opener	Password Added	Password Protected File {FileName} successfully closes with original password.

Category	Event Code	Sub-Category	Event Name	Event Description
Trace	10060200	Password Protected Opener	Wrong Password	Password Protected File {FileName} couldn't be opened.
Trace	10080100	Validate Signature	Validate Signature Succeeded	Signature Validation for file {FileName} succeeded.
System	20060800	System Error	Fatal Error	System error occurred during handling request of file {FileName}.
System	21020100	Warning	Low Disk Space	The system is running on low disk space: Used {used} of {diskSize} ({usagePercent}%), available {available}
Indicator	50010000	Macro Analyzer	Suspicious Macro	Suspicious Office macro detected.
Indicator	50010010	Macro Analyzer	Auto Execution Macro	Suspicious Office macro detected [Auto Execution].
Indicator	50010020	Macro Analyzer	File System Activity Macro	Office macro detected [File System Activity].
Indicator	50010030	Macro Analyzer	Out Of Document Interaction Macro	Office macro detected [Out-Of-Document Interaction].
Indicator	50010040	Macro Analyzer	Suspicious Office Excel 4.0 Macro	Suspicious Office Excel 4.0 macro detected.
Indicator	50010050	Macro Analyzer	Suspicious File System Activity Macro	Suspicious Office macro detected [File System Activity].
Indicator	50010060	Macro Analyzer	Suspicious Out of Document Interaction Macro	Suspicious Office macro detected [Out-Of-Document Interaction].
Indicator	50020010	File Type Discoverer	Suspicious Fake File	Suspicious fake file [Extension does not match file structure] detected in the artifact.
Indicator	50020020	File Type Discoverer	Suspicious Unknown File	Unknown file [Data file or unidentified file type] detected in the artifact.
Indicator	50020110	File Type Discoverer	Suspicious Executable File	Executable file detected in the artifact.
Indicator	50020120	File Type Discoverer	Suspicious Script File	Script file detected in the artifact.

Category	Event Code	Sub-Category	Event Name	Event Description
Indicator	50040010	Active Element	External Program Run Action	External Program Run Action detected in file {Filename}.
Indicator	50050010	JavaScript Analyzer	Dynamic code execution	Dynamic code execution detected in file {Filename}.
Indicator	50060010	Suspicious URL	Suspicious URL detected	Suspicious url detected in file {FileName}, URLs: {SuspiciousUrlsList}
Indicator	50065010	Xml Bomb	Xml Bomb detected	Xml Bomb detected.
Indicator	50070050	Suspicious File Structure	Suspicious File Structure	Suspicious structure detected in file {FileName}
Indicator	50075050	Svg Bomb	Svg Bomb detected	Svg Bomb detected.
Indicator	50090200	Validate Signature	Validate Signature Failed	Signature Validation for file {FileName} failed.
File Process	60020010	File Process	Publish Complete	File {FileName} published.
File Process	60020020	File Process	Publish Original Complete	File {FileName} original published.
